# MAINTENANCE

# **1. INSTRUCTION**

#### 1) INTERVAL OF MAINTENANCE

- You may inspect and service the machine by the period as described at page 6-11 based on hour meter at control panel.
- (2) Shorten the interval of inspect and service depending on site condition. (such as dusty area, quarry, sea shore and etc.)
- (3) Practice the entire related details at the same time when the service interval is doubled.
   For example, in case of 100hours, carry out all the maintenance 「Each 100hours, each 50 hours and daily service」 at the same time.

## PRECAUTION

2) Start to maintenance after you have the full knowl-(1) edge of machine.

The monitor installed on this machine does not

(2) entirely guarantee the condition of the machine. Daily inspection should be performed according to clause 4, maintenance check list.

Engine and hydraulic components have been (3) preset in the factory.

Do not allow unauthorized personnel to reset them.

Drain the used oil and coolant in a container and

(4) handle according to the method of handling for industrial waste to meet with regulations of each province or country.

Hot oil and hot components can cause per-

A sonal injury. Do not allow hot oil or hot components to contact skin.

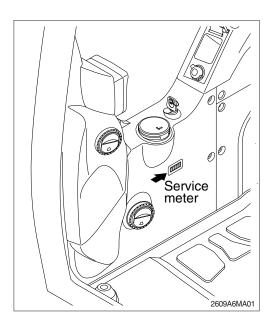

Accumulated grease and oil on the machine

 $\triangle$  is a fire hazard. Remove this debris with steam cleaning or high pressure water, at least every 1000 hours.

Inspect the engine compartment for any trash

△ build up. Remove any trash build up from the engine compartment.

Ask to your local dealer or HD Hyundai (5) Construction Equipment for the maintenance advice if unknown.

#### **3) PROPER MAINTENANCE**

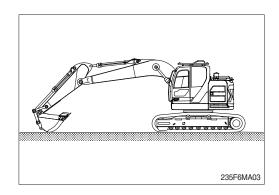

#### (1) Replace and repair of parts

It is required to replace the wearable and consumable parts such as bucket tooth, side cutter, filter and etc., regularly. Replace damaged or worn parts at proper time to keep the performance of machine.

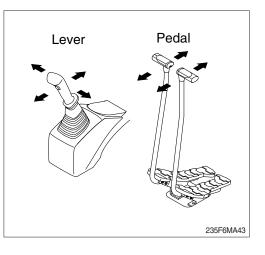

- (2) Use genuine parts.
- (3) Use the recommended oil.
- (4) Remove the dust or water around the inlet of oil tank before supplying oil.
- (5) Drain oil when the temperature of oil is warm.
- (6) Do not repair anything while operating the engine.Stop the engine when you fill the oil.
- (7) Relieve hydraulic system of the pressure before repairing the hydraulic system.
- (8) Confirm if the cluster is in the normal condition after completion of service.
- (9) For more detail information of maintenance, please contact local HD Hyundai Construction Equipment dealer.
- ※ Be sure to start the maintenance after fully understand the chapter 1, safety hints.

### 4) RELIEVING THE PRESSURE IN THE HYDRAULIC SYSTEM

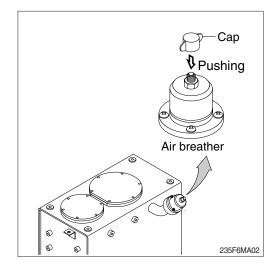

- Spouting of oil can cause the accident when loosening the cap or hose right after the operating of machine as the machine or oil is on the high pressure on the condition.
   Be sure to relieve the pressure in the system before repairing hydraulic system.
- (1) Place machine in parking position, and stop the engine.

- (2) Set the safety lever completely in the release position, operate the control levers and pedals fully to the front, rear, left and right, to release the pressure in the hydraulic circuit.
- \* This does not completely release the pressure, so when serving hydraulic component, loosen the connections slowly and do not stand in the direction where the oil spurt out.

(3) Loosen the cap and relieve the pressure in the tank by pushing the top of the air breather.

# 5) PRECAUTION WHEN INSTALLING HYDRAULIC HOSES OR PIPES

- Be particularly careful that the joint of hose, pipe and functioning item are not damaged. Avoid contamination.
- (2) Assemble after cleaning the hose, pipe and joint of functioning item.
- (3) Use genuine parts.
- (4) Do not assemble the hose in the condition of twisted or sharp radius.
- (5) Keep the specified tighten torque.

### 6) PERIODICAL REPLACEMENT OF SAFETY PARTS

 It is desirable to do periodic maintenance the machine for using the machine safely for a long time.

However, recommend to replace regularly the parts related safety not only safety but maintain satisfied performance.

(2) These parts can cause the disaster of life and material as the quality changes by passing time and it is worn, diluted, and gets fatigued by using repeatedly.

These are the parts which the operator can not judge the remained lifetime of them by visual inspection.

(3) Repair or replace if an abnormality of these parts is found even before the recommended replacement interval.

Perio	Interval		
Engine		Fuel hose (tank-engine)	_
		Heater hose (heater-engine)	Every 2 years
		Pump suction hose	_
	Main circuit		Every 2 years
Hydraulic	CIICUIL	Swing hose	Z youro
system		Boom cylinder line hose	
	Working Arm cylinder line hose		Every 2 years
		Bucket cylinder line hose	2 yours

- \* 1. Replace O-ring and gasket at the same time when replacing the hose.
  - 2. Replace clamp at the same time if the hose clamp is cracked when checking and replacing the hose.

# 2. TIGHTENING TORQUE

Use following table for unspecified torque.

# 1) BOLT AND NUT

# 5) TIGHTENING TORQUE OF MAJOR COMPONENT

\* For tightening torque of engine and hydraulic components, see engine maintenance guide and service manual.

# 3. FUEL, COOLANT AND LUBRICANTS

### 1) NEW MACHINE

New machine used and filled with following lubricants.

Description	Specification			
Engine oil (API CJ-4, ACEA-E9)	SAE 10W-30, *SAE 5W-40			
DEF/AdBlue®	ISO 22241 (32.5% high-purity urea and 67.5% deionized water)			
	HD Hyundai Construction Equipment genuine long life (ISO VG 32, VG 46, VG 68)			
Hydraulic oil	Conventional hydraulic oil (ISO VG 15*)			
	HD Hyundai Construction Equipment Bio Hyudraulic Oil (HBHO, ISO VG 46)			
Swing and travel reduction gear	SAE 80W-90 (GL-4/GL-5)			
Grease	Lithium base grease NLGI No. 2			
Fuel	ASTM D975-No. 2, Ultra low sulfur diesel			
Coolort	Mixture of 50% ethylene glycol base antifreeze and 50% water.			
Coolant	Mixture of 60% ethylene glycol base antifreeze and 40% water. $\star$			
SAE : Society of Automotiv	e Engineers Ultra low sulfur diesel			
API : American Petroleum	Institute - sulfur content $\leq$ 15 ppm			

**ISO** : International Organization for Standardization

NLGI : National Lubricating Grease Institute

ASTM : American Society of Testing and Material

DEF : Diesel Exhaust Fluid

DEF compatible with AdBlue®

★Cold region Russia, CIS, Mongolia

### 2) RECOMMENDED OILS

HD Hyundai Construction Equipment genuine lubricating oils have been developed to offer the best performance and service life for your equipment. These oils have been tested according to the specifications of HD Hyundai Construction Equipment and, therefore, will meet the highest safety and quality requirements. We recommend that you use only HD Hyundai Construction Equipment genuine lubricating oils and grease officially approved by HD Hyundai Construction Equipment.

SAE : Society of Automotive Engineers

- API : American Petroleum Institute
- ISO : International Organization for Standardization
- NLGI : National Lubricating Grease Institute
- **ASTM** : American Society of Testing and Material
- DEF : Diesel Exhaust Fluid DEF compatible with AdBlue®
- \* : Cold region (Russia, CIS, Mongolia)

 $\star^1$ : Ultra low sulfur diesel

- sulfur content  $\leq$  15 ppm
- \*2 : Soft water City water or distilled water
- \*3 : HD Hyundai Construction Equipment Bio Hydraulic Oil
- \* Using any lubricating oils other than HD Hyundai Construction Equipment genuine products may lead to a deterioration of performance and cause damage to major components.
- \* Do not mix HD Hyundai Construction Equipment genuine oil with any other lubricating oil as it may result in damage to the systems of major components.
- \* Do not use any engine oil other than that specified above, as it may clog the diesel particulate filter(DPF).
- \* For HD Hyundai Construction Equipment genuine lubricating oils and grease for use in regions with extremely low temperatures, please contact HD Hyundai Construction Equipment dealers.

# 4. MAINTENANCE CHECK LIST

# 1) DAILY SERVICE BEFORE STARTING

Check items	Service	Page
Visual check		
Fuel tank	Check, Refill	6-27
Hydraulic oil level	Check, Add	6-33
Engine oil level	Check, Add	6-18
Coolant level	Check, Add	6-20
Control panel & pilot lamp	Check, Clean	6-43
Prefilter (water, element)	Drain, Clean	6-27
Fan belt tension and damage	Check, Adjust	6-24, 25
DEF/AdBlue® tank	Check, Add	6-31
★ Attachment pin and bushing	Lubricate	6-42
· Boom cylinder tube end		
· Boom foot		
· Boom cylinder rod end		
· Arm cylinder tube end		
· Arm cylinder rod end		
· Boom + Arm connecting		
· Bucket cylinder tube end		

 $\star$  Lubricate every 10 hours or daily for initial 50 hours.

# 2) EVERY 50 HOURS SERVICE

Check items	Service	Page
Fuel tank (water, sediment)	Drain	6-27
Track tension	Check, Adjust	6-38
Swing reduction gear oil	Check, Add	6-36
Attachment pin and bushing	Lubricate	6-42
· Bucket cylinder rod end		
· Bucket + Arm connecting		
· Bucket control link + Arm		
· Bucket control rod		

# 3) INITIAL 50 HOURS SERVICE

Check items	Service	Page
Bolts & Nuts	Check, Tight	6-8
· Sprocket mounting bolts		
· Travel motor mounting bolts		
· Swing motor mounting bolts		
· Swing bearing mounting bolts		
· Engine mounting bolts		
· Counterweight mounting bolts		
· Turning joint locating bolts		
· Track shoe mounting bolts and nuts		
· Hydraulic pump mounting bolts		

## 4) EVERY 200 HOURS SERVICE

Check items	Service	Page
★ Return filter	Replace	6-35
★ Pilot line filter	Replace	6-36
★ Drain filter cartridge	Replace	6-35

★ Replace 3 filters for continuous hydraulic breaker operation only.

# 5) INITIAL 250 HOURS SERVICE

Check items	Service	Page
Engine oil	Change	6-18, 19
Engine oil filter	Replace	6-18, 19
Prefilter (water, element)	Replace	6-27
Fuel filter element	Replace	6-28
Pilot line filter element	Replace	6-36
Hydraulic oil return filter	Replace	6-35
Drain filter cartridge	Replace	6-35
Swing reduction gear oil	Change 6-36	
Travel reduction gear case	Change	6-37

# 6) EVERY 250 HOURS SERVICE

Check items	Service	Page
Battery (voltage)	Check, Clean	6-43
Swing bearing grease	Lubricate	6-36
Aircon & heater fresh air filter	Check, Clean	6-46
Bolts & Nuts	Check, Tight	6-8
· Sprocket mounting bolts		
· Travel motor mounting bolts		
<ul> <li>Swing motor mounting bolts</li> </ul>		
· Swing bearing mounting bolts		
· Engine mounting bolts		
· Counterweight mounting bolts		
· Turning joint locating bolts		
<ul> <li>Track shoe mounting bolts and nuts</li> </ul>		
· Hydraulic pump mounting bolts		
Attachment pin and bushing	Lubricate	6-42
· Boom cylinder tube end		
· Boom foot		
· Boom cylinder rod end		
· Arm cylinder tube end		
· Arm cylinder rod end		
· Boom + Arm connecting		
· Bucket cylinder tube end		

# 7) EVERY 500 HOURS SERVICE

Check items	Service	Page
★Engine oil	Change	6-18, 19
★Engine oil filter	Replace	6-18, 19
Radiator, cooler fin and charge air cooler	Check, Clean	6-23
Fuel filter element	Replace	6-28
Prefilter	Replace	6-27

★ If you use high sulfur containing fuel above than 0.5% or use low grade of engine oil reduce change interval.

## 8) EVERY 1000 HOURS SERVICE

Check items	Service	Page
Hydraulic tank air breather element	Replace	6-35
Travel motor reduction gear oil	Change	6-37
Swing reduction gear oil	Change 6-36	
Grease in swing gear and pinion	Change	6-37
Hydraulic oil return filter	Replace	6-35
Drain filter cartridge	Replace	6-35
Pilot line filter	Replace	6-36
Air cleaner element (primary)*1	Check, Clean	6-26

\*<sup>1</sup>When working in dusty environments, more frequent cleaning is highly recommended.

## 9) EVERY 2000 HOURS SERVICE

Check items	Service	Page	
Coolant	Change 6-20, 21, 22,		
Hydraulic oil *2	Change	6-34	
HBHO*3	Change	6-34	
Hydraulic tank suction strainer	Check, Clean 6-3		
Crankcase breather filter	Replace 6-29		
RCV lever	Check, Lubricate	6-38	
Hoses, fittings, clamps (fuel, coolant, hydraulic)	Check, Retighten, Replace -		
Air cleaner element (primary, safety)*4	Replace	6-26	

\*<sup>2</sup> Conventional hydraulic oil

\*<sup>3</sup> If do not want to change HBHO(HD Hyundai Construction Equipment Bio Hydarulic Oil, ISO VG 46) every 2000 hours, contact HD Hyundai Construction Equipment dealer and ask about SAMPLING.

\*<sup>4</sup>When working in dusty environments, more frequent replacing is highly recommended.

\* Change hydraulic oil every 600 hours of continuous hydraulic breaker operation.

### 10) EVERY 4000 HOURS SERVICE

Check items	Service	Page
DEF/AdBlue® tank filter	Replace	6-31-1

### 11) EVERY 4500 HOURS SERVICE

Check items	Service	Page
DEF/AdBlue® supply module filter	Replace	6-32

### 12) EVERY 5000 HOURS SERVICE

Check items	Service	Page
Hydraulic oil*5	Change	6-34

\*<sup>5</sup> HD Hyundai Construction Equipment genuine long life

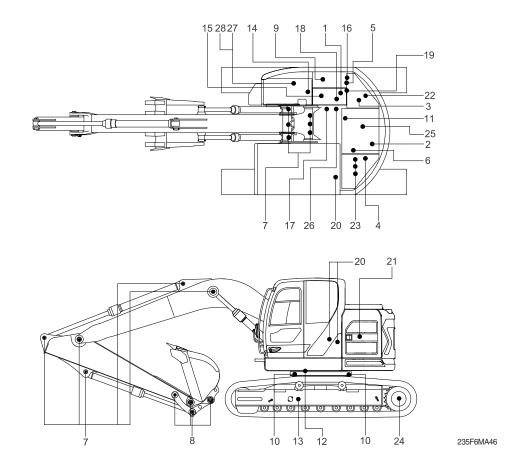

\* Change hydraulic oil every 1000 hours of continuous hydraulic breaker operation.

# 13) WHEN REQUIRED

Whenever you have trouble in the machine, you must perform the service of related items, system by system.

Check items						
Fuel system						
· Fuel tank	Drain or Clean	6-27				
· Prefilter	Clean or Replace 6-27					
· Fuel filter element	Replace	6-28				
Engine lubrication system						
· Engine oil	Change	6-18, 19				
· Engine oil filter	Replace	6-18, 19				
Engine cooling system						
· Coolant	Add or Change	6-20, 21, 22, 23				
· Radiator	Clean or Flush	6-20, 21, 22, 23				
· Charge air cooler	Check	6-23				
Engine air system						
· Air cleaner element (primary)	Clean or Replace	6-26				
· Air cleaner element (safety)	Replace	6-26				
Hydraulic system						
· Hydraulic oil	Add or Change	6-33, 34				
· Return filter	Replace	6-35				
· Drain line filter	Replace	6-35				
· Pilot line filter	Replace	6-36				
· Element of breather	Replace	6-35				
· Suction strainer	Clean	6-34				
· RCV lever	Lubricate	6-38				
Undercarriage						
· Track tension	Check, Adjust	6-38				
Bucket						
· Bucket assy	Replace	6-39				
· Tooth	Replace	6-40				
· Side cutter	Replace	6-40				
· Linkage	Adjust	6-41				
Air conditioner and heater						
· Fresh air filter	Clean, Replace	6-46, 47				
· Recirculation filter	Clean	6-46, 47				
Other						
· DEF/AdBlue® tank	Check, Add	6-31				
· DEF/AdBlue® supply module filter	Replace	6-32				
· DEF/AdBlue® supply tank filter	Replace	6-31				

# **5. MAINTENANCE CHART**

### Caution

- 1. Service intervals are based on the hour meter reading.
- 2. The number of each item shows the lubrication point on the machine.
- 3. Stop engine while filling oil, and use no open flames.

Service interval	No.	Description	Service action	Oil symbol	Capacity ℓ (U.S.gal)	Service points No.
	1	Hydraulic oil level	Check, Add	НО	160 (42.3)	1
	2	Engine oil level	Check, Add	EO	23.7 (6.3)	1
	4	Radiator coolant	Check, Add	С	40 (10.6)	1
10 Hours or daily	5	Prefilter (water, element)	Check, Clean	-	-	1
	6	Fan belt tension and damage	Check, Adjust	-	-	1
	9	Fuel tank	Check, Refill	DF	300 (84.5)	1
	27	DEF/AdBlue® tank	Check, Add	DEF	27.0 (7.1)	1
	8	Bucket linkage pins	Check, Add	PGL	-	6
50 Hours	9	Fuel tank (water, sediment)	Check, Clean	-	-	1
or weekly	11	Swing reduction gear oil	Check, Add	GO	7.0 (1.8)	1
	13	Track tension	Check, Adjust	PGL	-	2

Service interval	No.	Description	Service action	Oil symbol	Capacity ℓ (U.S.gal)	Service points No.
	7	Attachment pins & bushing	Check, Add	PGL	-	11
250	10	Swing bearing grease	Check, Add	PGL	-	2
Hours	14	Battery (voltage)	Check	-	-	1

As	21	Air cleaner element (primary)	Clean, Replace	_	-	1
required	21	Air cleaner element (safety)	Replace	-	-	1
-						· · ·

\*1 Conventional hydraulic oil \*<sup>2</sup>HD Hyundai Construction Equipment Bio Hydraulic Oil

\*<sup>3</sup> HD Hyundai Construction Equipment genuine long life

\* Oil symbol : Please refer to the recommended lubricants for specification.

PGL : Grease

DF : Diesel fuel C : Coolant

GO : Gear oil HO : Hydraulic oil EO : Engine oil

DEF : DEF/AdBlue®

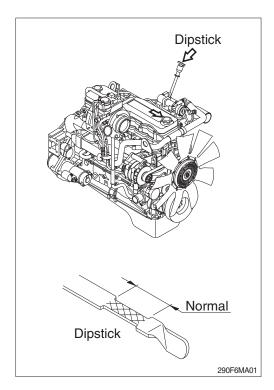

6-17

# **6. SERVICE INSTRUCTION**

### 1) CHECK ENGINE OIL LEVEL

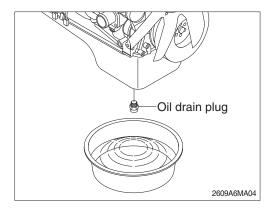

Check the oil level with the machine on a flat ground before starting engine.

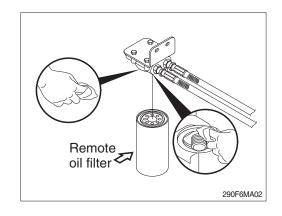

- (1) Pull out the dipstick and wipe with a clean cloth.
- (2) Check the oil level by inserting the dipstick completely into the hole and pulling out again.
- (3) If oil level is LOW, add oil and then check again.
- If the oil is contaminated or diluted, change the oil regardless of the regular change interval.
- \* Check oil level after engine has been stopped for 15 minutes.
- A Do not operate unless the oil level is in the normal range.

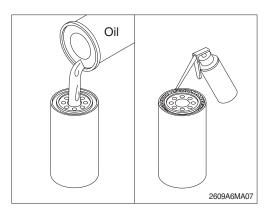

## 2) REPLACEMENT OF ENGINE OIL AND OIL FILTER

- (1) Operate the engine until the coolant temperature reaches 60°C (140°F). Shut off the engine.
- (2) Remove the oil drain plug. Drain the oil immediately to be sure all the oil and suspended contaminants are removed from the engine.
- A drain pan with a capacity of 30 liters (7.9 U.S. gallons) will be adequate.
- (3) Clean the area around the lubricating oil filter head.
- (4) Use oil filter wrench to remove the oil filter.
- (5) Clean the gasket surface of oil filter head.
- \* The O-ring can stick on the filter head. Be sure it is removed before installing the new filter.

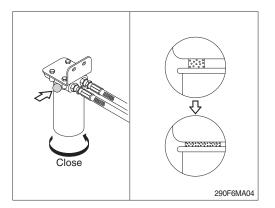

- (6) Apply a light film of lubricating oil to the gasket sealing surface before installing the filters.
- \* Fill the filters with clean lubricating oil.

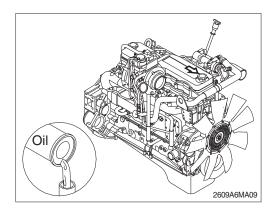

(7) Install the filter to the filter head.Tighten the filter until the gasket contacts the filter head surface.

Tighten 3/4 to 1 turn after the gasket makes contact with the filter head.

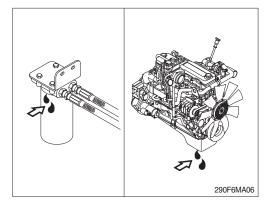

Mechanical over-tightening may distort the threads or damage the filter element seal.

- (8) Clean and check the lubricating oil drain plug threads and sealing surface. Install the lubricating oil pan drain plug.
- (9) Fill the engine with clean oil to the proper level.Quantity : 23.7 *l* (6.3 U.S.gallons)

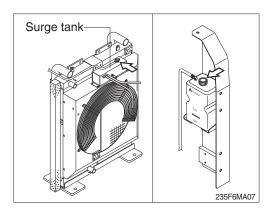

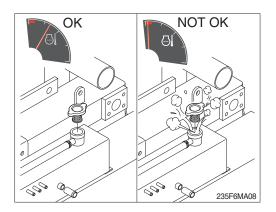

(10) Operate the engine at low idle and inspect for leaks at the filters and the drain plug.Shut the engine off and check the oil level with the dipstick. Allow 15 minutes for oil to drain down before checking.

### 3) CHECK COOLANT

- (1) Check if the level of coolant in reservoir tank is between FULL and LOW.
- (2) Add the mixture of antifreeze and water after removing the cap of the reservoir tank if coolant is not sufficient.
- (3) Be sure to use the reservoir empty, add the coolant by opening the cap of surge tank.
- (4) Replace gasket of radiator cap when it is damaged.
- ▲ Hot coolant can spray out if surge tank cap is removed while engine is hot. Remove the cap after the engine has cooled down.

### 4) FLUSHING AND REFILLING OF RADIATOR

- (1) Change coolant
- Avoid prolonged and repeated skin contact with used antifreeze. Such prolonged repeated contact can cause skin disorders or other bodily injury.

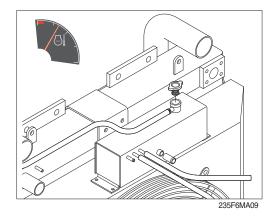

Avoid excessive contact-wash thoroughly after contact.

Keep out of reach of children.

Protect the environment : Handling and disposal of used antifreeze can be subject to federal, state, and local law regulation.

Use authorized waste disposal facilities, including civic amenity sites and garages providing authorized facilities for the receipt of used antifreeze.

If in doubt, contact your local authorities for guidance as to proper handling of used antifreeze.

A Wait until the temperature is below 50 °C (122 °F) before removing the coolant system pressure cap.

Failure to do so can cause personal injury from heated coolant spray.

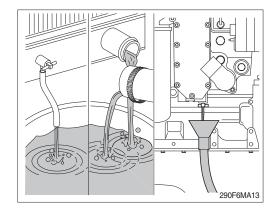

Drain the cooling system by opening the drain valve on the radiator and opening the drain valve on the bottom of the engine oil cooler housing. A drain pan with a capacity of 57 liters (15 U.S. gallons) will be adequate.

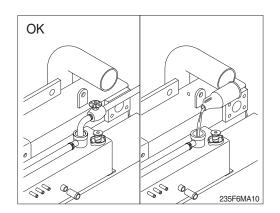

## (2) Flushing of cooling system

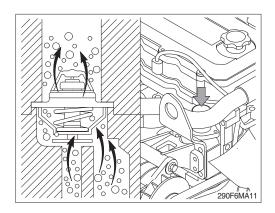

- Fill the system with a mixture of sodium carbonate and water (or a commercially available equivalent).
- W Use 0.5kg (1.0 pound) of sodium carbonate for every 23 liters (6.0 U.S. gallons) of water.
- \* Do not install the surge tank cap. The engine is to be operated without the cap for this process.
- \* During filling, air must be vented from the engine coolant passages.

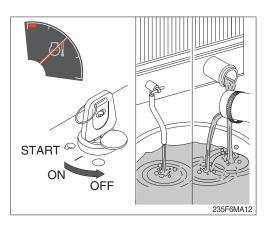

The system must be filled slowly to prevent air locks or serious engine damage can result. Wait 2 to 3 minutes to allow air to be vented, then add mixture to bring the level to the top.

 ② Operate the engine for 5 minutes with the coolant temperature above 80°C (176°F).
 Shut the engine off, and drain the cooling system.

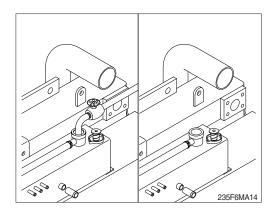

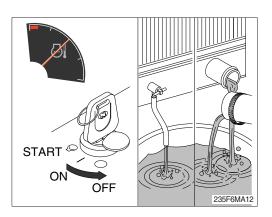

- ③ Fill the cooling system with clean water.
- \* Be sure to vent the engine and aftercooler for complete filling.
- \* Do not install the surge tank cap or the new coolant filter.

- ④ Operate the engine for 5 minutes with the coolant temperature above 80°C (176°F).
   Shut the engine off, and drain the cooling system.
- If the water being drained is still dirty, the system must be flushed again until the water is clean.

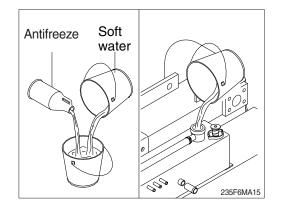

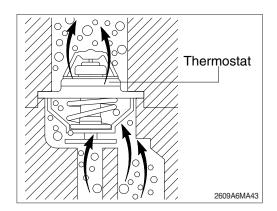

### (3) Cooling system filling

- Use a mixture of 50 percent soft water and 50 percent ethylene glycol antifreeze to fill the cooling system. Refer to the page 6-10. Coolant capacity (engine only) : 10l (2.6 U.S. gallons)
- ※ Do not use hard water such as river water or well water.
- ② The system has a maximum fill rate of 19 liters (5.0 U.S. gallons) per minute.
   Do not exceed this fill rate.
- \* The system must be filled slowly to prevent air locks.

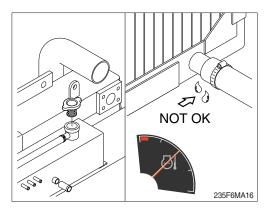

During filling, air must be vented from the engine coolant passage.

③ Install the pressure cap. Operate the engine until it reaches a temperature 80°C (176°F), and check for coolant leaks.
Check the coolant leaks.

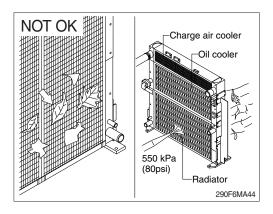

Check the coolant level again to make sure the system is full of coolant.

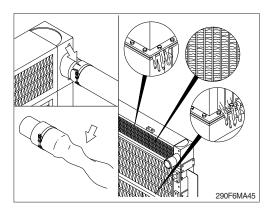

# 5) CLEAN RADIATOR AND OIL COOLER

Check, and if necessary, clean and dry outside of radiator and oil cooler. After working in a dusty place, clean radiator more frequently.

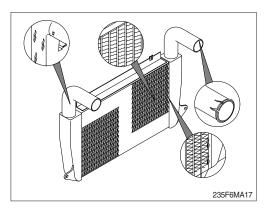

- (1) Visually inspect the radiator for clogged radiator fins.
- (2) Use 550 kPa (80 psi) air pressure to blow the dirt and debris from the fins.
- (3) Visually inspect the radiator for bent or broken fins.
- If the radiator must be replaced due to bent or broken fins which can cause the engine to overheat, refer to the manufacturer's replacement procedures.
- (4) Visually inspect the radiator for core leaks.

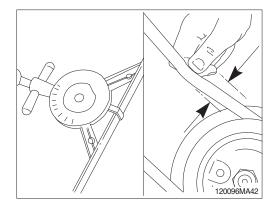

# 6) CHECK CHARGE AIR COOLER

Inspect the charge air cooler for dirt and debris blocking the fins. Check for cracks, holes, or other damage. If damage is found, please contact HD Hyundai Construction Equipment distributor.

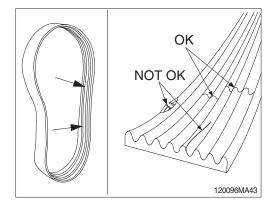

# 7) FAN BELT

(1) An deflection method can be used to check belt tension by applying 11.3 kgf (25 lbf) force between the pulleys on V-belts. If the deflection is more than one belt thickness per foot of pulley center distance, the belt tension must be adjusted.

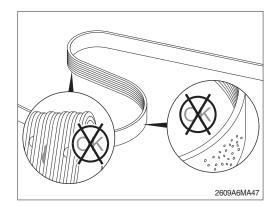

(2) Inspect the fan belt for damage.

- ① Transverse (across the belt) cracks are acceptable.
- ② Longitudinal (direction of belt ribs) cracks that intersect with transverse cracks are not acceptable.

- $\ensuremath{\textcircled{}}$  Inspect the belt
  - Embedded debris
  - Uneven/excessive rib wear
  - Exposed belt cords
  - Glazing (high heat)
- If any of the above conditions are pressnt, the belt is unacceptable for reuse and must be replaced.

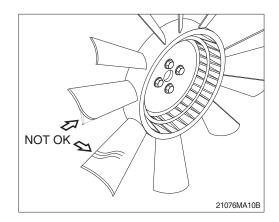

### 8) INSPECTION OF COOLING FAN

- A Personal injury can result from a fan blade failure. Never pull or pry on the fan. This can damage the fan blade and cause fan failure.
- \* Rotate the crankshaft by using the engine bearing gear.
- \* A visual inspection of the cooling fan is required daily.

Check for cracks, loose rivets, and bent or loose blades.

Check the fan to make sure it is securely mounted. Tighten the capscrews if necessary. Replace any fan that is damaged.

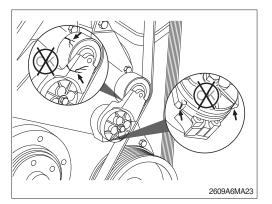

### 9) FAN BELT TENSIONER

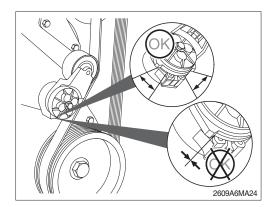

(1) With the engine stopped, check the tensioner arm, pulley, and stops for cracks. If any cracks are found, the tensioner must be replaced.

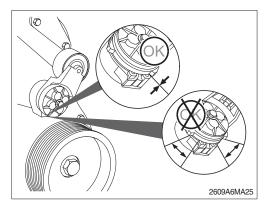

(2) With the belt installed, verify that neither tensioner arm stop is in contact with the spring case stop.

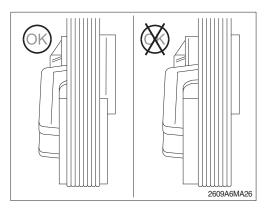

After replacing the belt, if the tensioner arm stops are still in contact with the spring case stop, replace the tensioner.

- (3) With the belt removed, verify that the tensioner arm stop is in contact with the spring case stop.If these two are not touching, the tensioner must be replaced.
- After replacing the belt, if the tensioner arm stop is still in contact with the spring case stop, the tensioner must be replace.
- (4) Check the location of the drive belt on the belt tensioner pulley. The belt should be centered on, or close to the middle of, the pulley. Misaligned belts, either too far forward or backward, can cause belt wear, belt roll-offs, or increase uneven tensioner bushing wear.

### 10) CLEANING OF AIR CLEANER

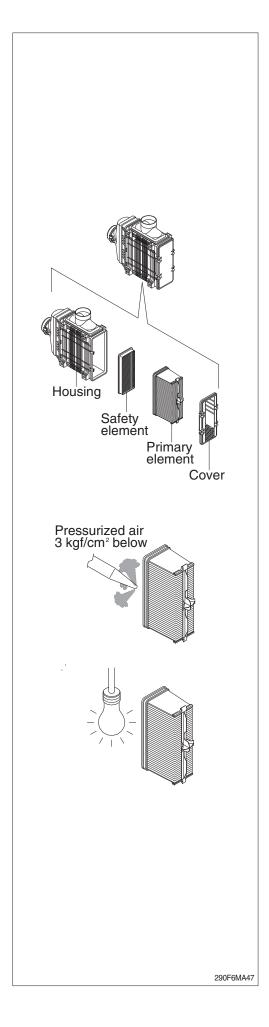

### (1) Primary element

- ① Open the cover and remove the element.
- <sup>(2)</sup> Wipe all contaminant and debris from inside the housing body.
- ③ Do not clean the filter element by striking or hitting the filter against any object to shake the debris from the filter element.
- ④ Clean the filter element with compressed air.
- a. Remove dust from filter element by directing the compressed air into the opening of the air filter element.
- b. Use 3 kg/cm<sup>2</sup> (40 psi) maximum air pressure and hold the compressed air nozzle at least 2.5 cm (1") away from the pleats while cleaning. Make sure to keep the clean side of air filter free of debris.
- ⑤ Visually inspect for damage to the filter elements and components. Use a light source to help identify any defects in the media. If any defects are observed discard the filter element and replace with a new primary filter element.
  - a. Before any type of cleaning, a visual inspection of the filter is needed. If there is any damage to the filter body, gaskets or endplates, do not clean or reuse; the filter should be discarded. Always clean filters in a clean environment, observe strict inspection procedures and repackage filters immediately after the cleaning process with appropriate materials.
- b. Use observe proper safety precautions and dispose of waste materials in an environmentally compliant manner.
- 6 Re-install filter element into the air housing.
- ⑦ Replace the primary element at the fourth cleaning.

### (2) Safety element

The safety filter element should never be cleaned since the safety filter is the last barrier to contaminant before it reaches engine.

The useful life of the safety filter is equivalent to that of the primary air filter only if the primary filter element is being regularly cleaned. If the primary filter element is not cleaned, the safety filter should be changed at every third primary air filter change or after one year of continuous service, whichever occurs first.

### 11) FUEL TANK

- (1) Fill fuel fully when system the operation to minimize water condensation, and check it with fuel gauge before starting the machine.
- (2) Drain the water and sediment in the fuel tank by opening the drain cock.
- \* Be sure to LOCK the cap of fuel tank.
- Remove the strainer of the fuel tank and clean it if contaminated.
- ▲ Stop the engine when refueling. All lights and flames shall be kept at a safe distance while refueling.

### 12) PREFILTER

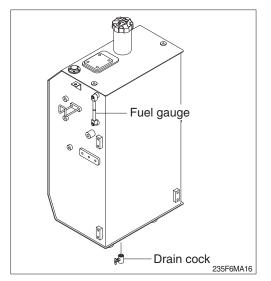

Inspect or drain the collection bowl of water daily and replace the element every 500hours.

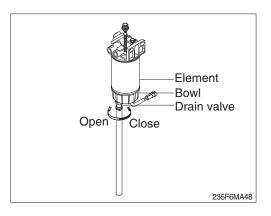

### (1) Drain water

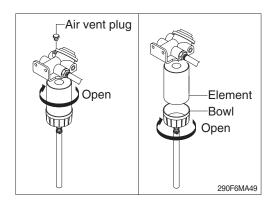

- $(\ensuremath{\underline{1}})$  Open bowl drain valve to evacuate water.
- 2 Close drain valve.
- \* Don't tighten up a drain valve so strong.
- \* Please inspect and drain water frequently for remain water volume to be less than 1/3 volume of a collection bowl.

### (2) Replace element

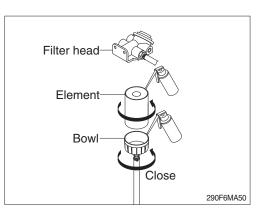

- ① Loosen the air vent plug and drain the unit of fuel. Follow "Drain water" instructions above.
- 2 Remove element and bowl from filter head.
- \* The bowl is reusable, do not damage or discard.
- ③ Separate element from bowl. Clean bowl and seal gland.

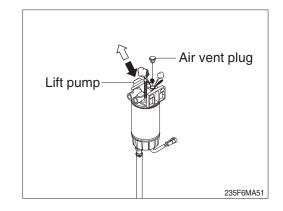

- ④ Lubricate new bowl seal with clean fuel or motor oil and place in bowl gland.
- (5) Attach bowl to new element firmly by hand.
- 6 Lubricate new element seal and place in element top gland.
- $\textcircled{\sc 0}$  Attach the element and bowl to the head.

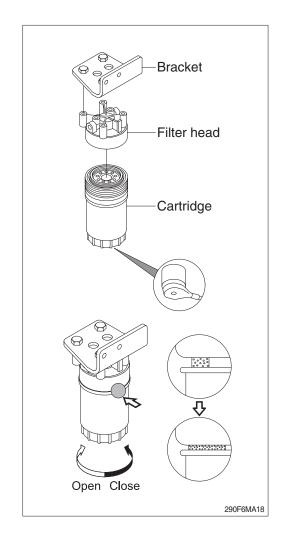

- ⑧ Do hand-priming the lift pump repeatedly until air bubbles comes out from air vent hole completely.
- 9 Tighten the air vent plug to its origin position.
- ▲ The fuel pump, high-pressure fuel lines, and fuel rail contain very high-pressure fuel. Do not loosen any fittings while the engine is running. Personal injury and property damage can result. Wait at least 10 minutes after shutting down the engine before loosening any fittings in the high-pressure fuel system to allow pressure to do decrease to a lower level.

### 13) REPLACEMENT OF FUEL FILTER

- (1) Use 1" wrench, loosen and remove the filter and clean the gasket surface.
- Make sure O-ring does not stick to filter head. Remove O-ring with screwdriver if necessary.
- (2) Lubricate the fuel filter O-ring with clean lubricating oil.
- (3) Install the filter on the filter head. Tighten the filter until the gasket contacts the filter head surface. Tighten the fuel filter an additional 3/4 turn after contact.
- Mechanical overtightening can distort the threads or damage the filter element seal.
- (4) Relieve the air after mounting.
- Do not pre-fill an on-engine fuel filter with fuel. The system must be primed after the fuel filter is installed. Pre filling the fuel filter can result in debris entering the fuel system and damaging fuel system components.
- \* Check for fuel leakage after the engine starts. If air is in the fuel system, the engine will not start. Start engine after bleeding the air according to the method of bleeding air.

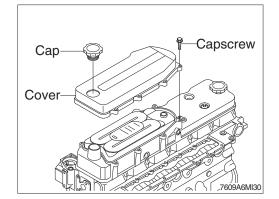

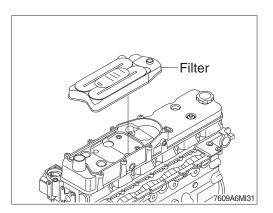

#### 14) CRANKCASE BREATHER FILTER

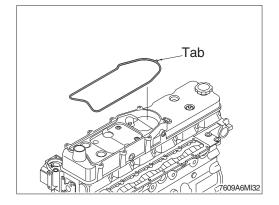

- \* Do not use pneumatic tools to remove the breather cover capscrews. Damage to the rocker cover can result.
- (1) Remove the oil fill cap.
- (2) Remove the crankcase breather filter cover capscrews.
- (3) Remove the filter cover.

- ※ Do not disturb the crankcase breather filter gasket located on the rocker lever cover.
- Exposure to oil can cause the gasket to swell, which can make it difficult to install the gasket back into groove. If the gasket comes out of the groove, do not attemp to install the gasket. Replace it with a new gasket.
- (5) If the gasket is damaged, remove the gasket by grasping the tab on the gasket and pulling up.
- (6) Clean the crankcase breather filter mounting surface and O-ring sealing surfaces on the rocker lever cover.
- (7) Clean the crankcase breather filter cover with warm soapy water.Inspect the cover for cracks.Replace the cover if damage is found.

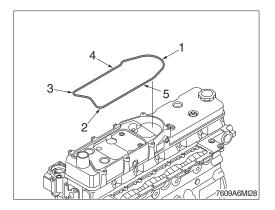

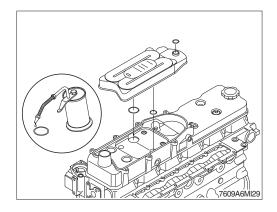

(8) If the gasket was removed, install the gasket into the rocker lever cover groove starting with the tab end first. Then install the corners opposite the gasket tab end. Finish by pushing in the sides (see illustration).

Gently push the gasket down into the groove. Do not used a finger to trace the gasket around into the groove during installation, as this will stretch the gasket, making it difficult to fully seat into the groove.

- Do not cut the gasket to make it fit into the groove, as this will result in an oil leak.
   The gasket must be fully seated around the entire perimeter of the rocker lever cover groove.
- (9) Apply clean engine oil to the O-rings on the crankcase breather filter.

Install the filter onto the rocker lever cover.

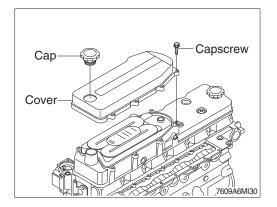

(10) Install the crankcase breather filter cover. Install the filter cover capscrews.

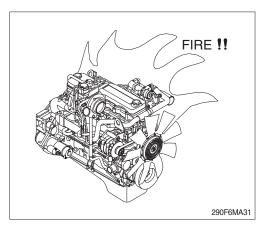

Tighten the capscrews, starting with the innermost capscrews and working outward in a circular manner.

 $\cdot$  0.71 kgf  $\cdot$  m (5.16 lbf  $\cdot$  ft) Install the oil fill cap.

### 15) LEAKAGE OF FUEL

▲ Be careful and clean the fuel hose, injection pump, fuel filter and other connections as the leakage from these part can cause fire.

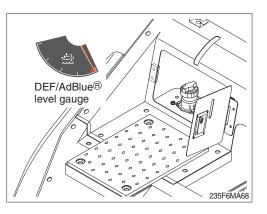

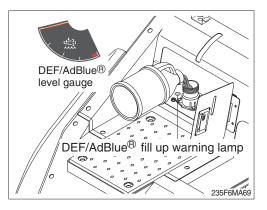

### 16) DEF/AdBlue® TANK

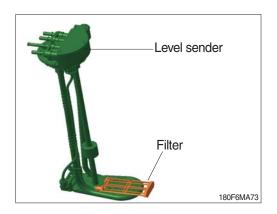

- (1) The DEF/AdBlue® tank level must be checked daily with DEF/AdBlue® level gauge.
- (2) If the DEF/AdBlue® level is found to below, DEF/AdBlue® must be added.
- ▲ It is unlawful to tamper with or remove any component of the aftertreatment system. It is also unlawful to use a catalyst solution that does not meet the specifications provided or the operate the machine with no catalytic solution.
- (3) DEF/AdBlue® fill up warning lamp turns on when tank is completely filled with DEF/ AdBlue®. After turning light on, do not pour DEF/AdBlue® any more.
- % Fill the tank with DEF/AdBlue® after key on and then turn off the start key.
- ※ Be careful to entering dust, sand or other contamination substance when you refill the DEF/AdBlue® into the tank. Otherwise, fatal problem such as engine idle locking, derating or engine stopping can be happen.

#### \* DEF/AdBlue® tank filter

DEF/AdBlue® tank filter is mounted on the level sender of DEF/AdBlue® tank.

### 16-1) DEF/AdBlue® TANK FILTER

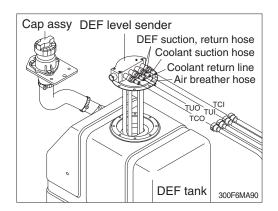

- (1) Remove coolant, DEF/AdBlue® and air vent hoses.
- Move hoses back and forth 3~4 times to easily remove the hoses.

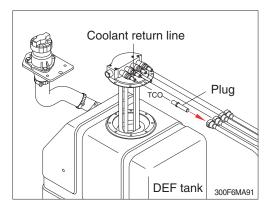

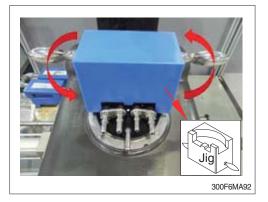

- When the coolant return line is removed, the coolant come out from the return line (TCO). Nearly comes out the coolant or DEF from other lines.
- (3) Rotate the DEF/AdBlue® level sender counterclockwise about 20 degree with the Jig (P/no : HDB030-0001).

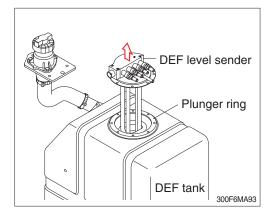

removal of the plunger ring.

(4) Remove the DEF/AdBlue® level sender without

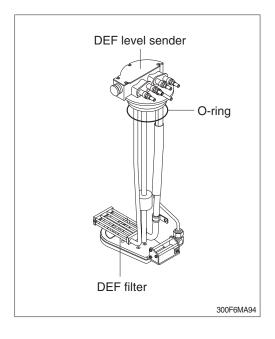

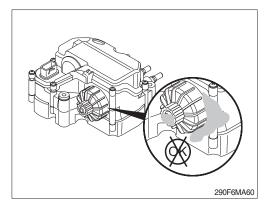

- (5) Removed DEF/AdBlue® level sender.
- \* Make sure O-ring is on the right position.
- (6) Replace the DEF/AdBlue® filter and fit with a new filter.
- \* Replace the filter every 4000 hours.
- \* Carry out installation in the reverse order to removal.

### 17) DEF/AdBlue® SUPPLY MODULE FILTER

- Inspect the area around the seal and vent of DEF/AdBlue® supply module filter cap for signs of leakage.
- % Turn DEF/AdBlue® the master switch mounted electric box.

(2) Unscrew the DEF/AdBlue® supply module filter cap.

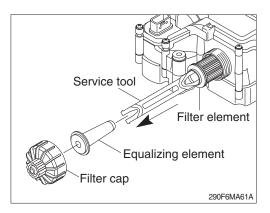

A 30 mm wrench can be used on the cap to aid in removal.

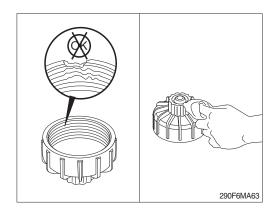

- (3) Remove the filter equalizing element.
- (4) Remove the old filter element.

A disposable service tool is included with the filter to aid in filter removal. Use the appropriate end of the tool, depending on the color of the plastic on the filter.

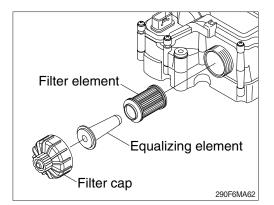

When inserting the tool a "click" sound can be heard which indicates proper engagement with the filter.

- If the filter element and equalizing element are removed from the aftertreatment DEF/ AdBlue® tank, they must be discarded and replaced; regardless of condition.
- (5) Clean and inspect the filter cap
- ① Clean the aftertreatment DEF/AdBlue® tank cap and threads on the DEF/AdBlue® tank with warm water and a clean cloth.
- ② Check the condition of the threads on the filter cap, if the threads are damaged, replace the filter cap.

- (6) Slide the filter equalizing element in to the new filter element.
- (7) Insert the assembly into the aftertreatment DEF/ AdBlue® supply module.
- (8) Install and tighten the filter cap.
   Tightening torque : 2.0 kgf · m (14.5 lbf · ft)

### **18) HYDRAULIC OIL CHECK**

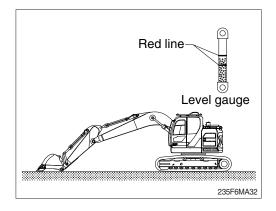

- (1) Position the machine as shown in the illustration on the right. Then stop engine.
- (2) Check the oil level at the level gauge of hydraulic oil tank.
- (3) The oil level is normal if the oil is between the red lines. The oil level depends on the temperature of the hydraulic oil. Refer to the height (A) in the below table to check the level gauge.

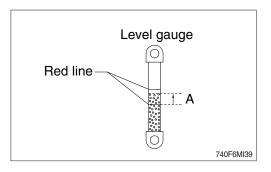

Temperature		Height A	
°C	°F	mm	inch
0	32	15	0.6
10	50	25	1.0
20	68	30	1.2
30	86	35	1.4
40	104	40	1.6

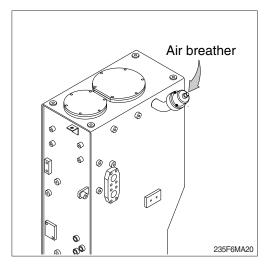

- \* Refer to page 3-22 for checking the temperature of the hydraulic oil.
- \* Add the hydraulic oil, if necessary.

### **19) FILLING HYDRAULIC OIL**

- (1) Stop the engine to the position of level check.
- (2) Relieve the pressure in the tank by pushing the top of the air breather.
- (3) Remove the breather on the top of oil tank and fill the oil to the specified level.
- (4) Start engine after filling and operate the work equipment several times.
- (5) Check the oil level at the level check position after engine stops.

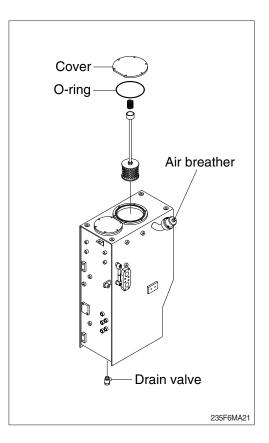

### 20) CHANGE HYDRAULIC OIL

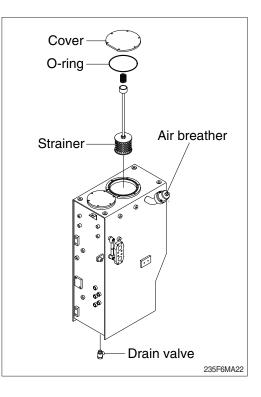

- Lower the bucket on the ground pulling the arm and bucket cylinder to the maximum.
- (2) Relieve the pressure in the tank by pushing the top of the air breather.
- (3) Remove the cover.
  - Tightening torque :  $6.9 \pm 1.4 \text{ kgf} \cdot \text{m}$ (50±10 lbf • ft)
- (4) Prepare a suitable container.
- (5) To drain the oil open the drain valve at the bottom of the oil tank.
- (6) Fill proper amount of recommended oil.
- (7) Put the breather in the right position.
- (8) Bleed air hydraulic pump loosen the air breather at top of hydraulic pump assembly.
- (9) Start engine and run continually. Release the air by full stroke of each control lever.
- Incase of injecting HBHO (HD Hyundai Construction Equipment Bio Hydraulic Oil) to machines that have formerly used different hydraulic oil, the proportion of residual oil must not exceed 2 %.
- Do not mix any other Bio oil, use only HBHO as bio oil. If changing to Bio oil, contact HD Hyundai Construction Equipment dealer.

### 21) CLEAN SUCTION STRAINER

Clean suction strainer as follows paying attention to the cause to be kept during oil filling.

- (1) Remove the cover.
  - $\cdot$  Tightening torque : 6.9  $\pm$  1.4 kgf  $\cdot$  m (50  $\pm$  10 lbf  $\cdot$  ft)
- (2) Pull out the strainer in the tank.
- (3) Wash the foreign material on the suction strainer with gasoline or cleaning oil.
- (4) Replace the suction strainer if it is damaged.
- (5) Assemble with reverse order of disassembly. Be sure to install a new O-ring and reinsert in the oil tank.
- Loosen the bolt slowly at the cover can be spring out by the spring when removing it.

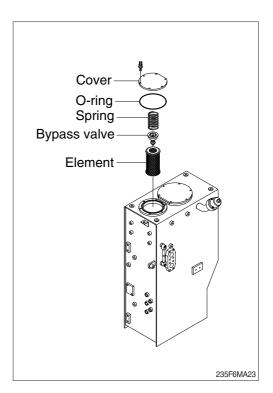

#### 22) REPLACEMENT OF RETURN FILTER

Replace as follows paying attention to the cause to be kept during the replacement.

- (1) Remove the cover.
  - $\label{eq:constraint} \begin{array}{c} \cdot \mbox{ Tightening torque : } 6.9 \pm 1.4 \mbox{ kgf} \cdot \mbox{m} \\ (50 \pm 10 \mbox{ lbf} \cdot \mbox{ft}) \end{array}$
- (2) Remove the spring, by-pass valve and return filter in the tank.
- (3) Replace the element with new one.

# 23) REPLACEMENT OF ELEMENT IN HYDRAULIC TANK BREATHER

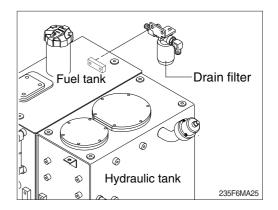

- (1) Relieve the pressure in the tank by pushing the top of the air breather.
- (2) Loosen the bolt and remove the cover.
- (3) Pull out the filter element.
- (4) Replace the filter element new one.
- (5) Reassemble by reverse order of disassembly.
  - Tightening torque : 0.8~1.0 kgf · m (5.9~7.4 lbf · ft)

#### Cover Element Element

# 24) REPLACE OF DRAIN FILTER CARTRIDGE

Clean the dust around filter and replace with new one after removing the cartridge.

- \* Tighten about 2/3 turn more after the gasket of cartridge contacts seal side of filter body for mounting.
- Change cartridge after initial 250 hours of operation. Thereafter, change cartridge every 1000 hours.

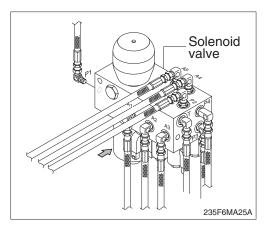

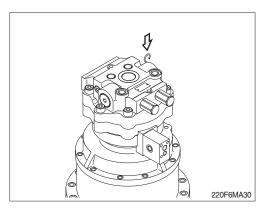

#### 25) REPLACE OF PILOT LINE FILTER

- (1) Loosen the nut positioned on the filter body.
- (2) Pull out the filter element and clean filter housing.
- (3) Install the new element and tighten using specified torque.
- Change cartridge after initial 250 hours of operation. Thereafter, change cartridge every 1000 hours.

### 26) CHECK THE SWING REDUCTION GEAR OIL

- (1) Pull out the dipstick and clean it.
- (2) Insert it again.
- (3) Pull out one more time to check the oil level and fill the oil if the level is not sufficient.

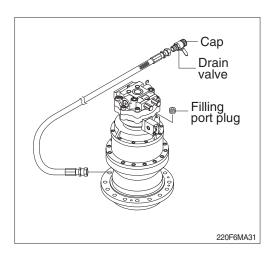

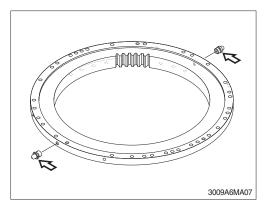

# 27) CHANGE SWING REDUCTION GEAR OIL

- (1) Raise the temperature of oil by swinging the machine before replace the oil and park the machine on the flat ground.
- (2) Prepare a proper container.
- (3) Open the cap and loosen the drain valve.
- (4) Clean around the valve and close the drain valve and cap.Fill proper amount of recommended oil.
  - Amount of oil : 7.0 *l* (1.8 U.S.gal)

#### **28) LUBRICATE SWING BEARING**

- (1) Grease at 2 fitting.
- \* Lubricate every 250 hours.

# 29) SWING GEAR AND PINION

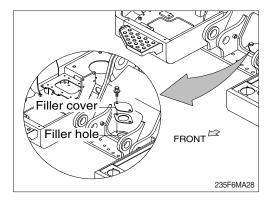

#### (1) Drain old grease

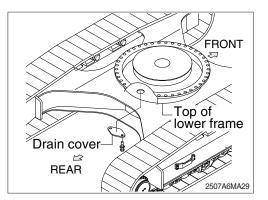

(2) Refill new grease ① Install drain cover.

② Fill with new grease.③ Install filler cover.

· Capacity : 13 kg (28.7 lb)

- 1 Remove under cover of lower frame.
- 0 Remove drain cover of lower frame.
- ③ Remove filler cover of upper frame.
- ④ Operate full turn (360°) of swing several times.

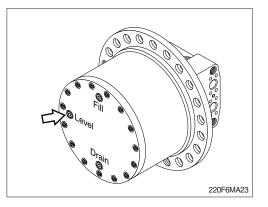

# 30) CHECK THE TRAVEL REDUCTION GEAR OIL

- (1) Operate the machine to the position of drain plug down to the flat ground.
- (2) Loosen the level plug and check the oil level.If the level is at the hole of the plug, it is normal.Fill the oil if it is not sufficient.
  - · Amount of oil : 7.8 ℓ (2.1 U.S.gal)

#### 31) CHANGE OF THE TRAVEL REDUCTION GEAR OIL

- (1) Raise the temperature of the oil by traveling machine first.
- (2) Stop when the position of the drain plug is down.
- (3) Loosen the level plug and then the drain plug.
- (4) Drain the oil to adequate container.
- (5) Tighten the drain plug and fill specified amount of oil at filling port.
- (6) Tighten the level plug and travel slowly to check if there is any leakage of oil.

# 32) LUBRICATE RCV LEVER

Remove the bellows and with a grease gun grease the joint part (A) and sliding parts (B).

### 33) ADJUSTMENT OF TRACK TENSION

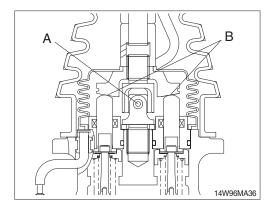

- It is important to adjust the tension of track properly to extend the lifetime of track and traveling device.
- \* The wear of pins and bushings on the undercarriage will vary with the working conditions and soil properties.

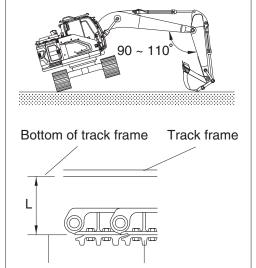

It is thus necessary to continually inspect the track tension so as to maintain the standard tension on it.

- (1) Raise the chassis with the boom and arm.
- (2) Measure the distance between bottom of track frame on track center and track of shoe.
- Remove mud with rotating the track before measuring.
- (3) If the tension is tight, drain the grease in the grease nipple and if the tension is loose, charge the grease.
- A Personal injury or death can result from grease under pressure.
- Inscrew the grease nipple after release the tension by pushing the poppet only when necessarily required.

Grease leaking hole is not existing. So, while unscrew the grease nipple, grease is not leaking until the grease nipple is completely coming out. If the tension is not released in advance, the grease nipple can be suddenly popped out by pressurized grease.

When the grease is drained, move the track to the forward and backward slightly. If the track tension is loose even after the grease is charged to the maximum, change the pins and bushings as there are worn seriously.

Back of shoe Track shoe

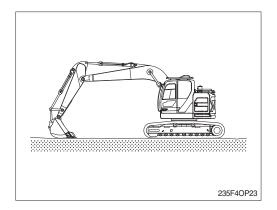

Length (L)			
300~320 mm	11.8~12.6"		

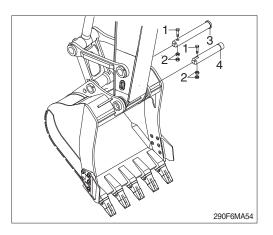

#### 34) REPLACEMENT OF BUCKET

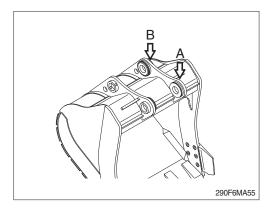

- When knocking the pin in with a hammer, metal particles may fly and cause serious injury, particularly if they get into your eyes. When carrying out this operation, always wear goggles, helmet, gloves, and other protective equipment.
- When the bucket is removed, place it in a stable condition.
- When performing joint work, make sure signals to each other and work carefully for safety's sake.
- (1) Lower the bucket on the ground as the picture shown in the right.
- (2) Lock the safety lever to the LOCK position and stop the engine.
- (3) Remove the stopper bolts(1) and nuts(2), then remove pins(3, 4) and remove the bucket.
- When removing the pins, place the bucket so that it is in light contact with the ground.
- If the bucket is lowered strongly to the ground, the resistance will be increased and it will be difficult to remove the pins.
- \* After remove the pins, make sure that they do not become contaminated with sand or mud and that the seals of bushing on both sides do not become damaged.
- (4) Align the arm with holes (A) and the link with holes (B), then coat with grease and install pins (3, 4)
- When installing the bucket, the O-rings are easily damaged, so fit the O-rings on the boss of the bucket as shown in the picture.

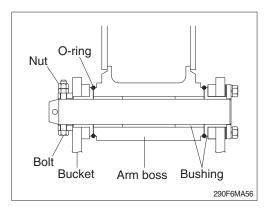

After knocking the pin, move the O-ring down to the regular groove.

(5) Install the stopper bolt (1) and nuts (2) for each pin, then grease the pin.

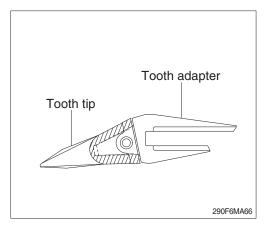

# 35) REPLACEMENT OF BUCKET TOOTH

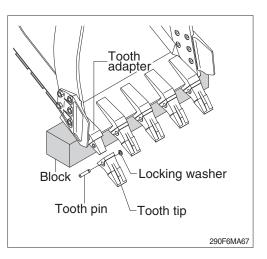

#### (1) Timing of replacement

- Check wearing condition as shown in the illustration and replace tooth tip before adapter starts to wear.
- 2 If excessive use, tooth adapter has worn out, replacement may become impossible.

#### (2) Instructions for replacement

- ① Pull out pin by striking pin with punch or hammer, avoiding damage to locking washer.
- ② Remove dust and mud from surface of tooth adapter by using knife.
- ③ Place locking washer in its proper place, and fit tooth tip to adapter.
- ④ Insert pin until locking washer is positioned at tooth pin groove.
- A Personal injury can result from bucket falling.
- A Block the bucket before changing tooth tips or side cutters.

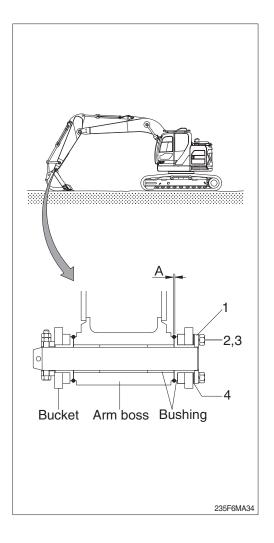

#### 36) ADJUSTMENT OF BUCKET CLEARANCE

- (1) Lower the bucket on the ground as the picture shown in the right.
- (2) Swing to the right and keep the arm boss to be contact to the bucket left.
- (3) Lock the safety lever to the LOCK position and stop the engine.
- (4) Measure the clearance (A) between bucket and arm boss. This is the total clearance.

# (5) Adjusting

- Loosen bolt (2), and remove washer (3), plate
   (1) and shim (4).
- 2 Remove the shim equivalent value with measuring value.
- ③ Assemble the parts in the reverse order of removal.
  - Tightening torque :  $29.6 \pm 3.2 \text{ kgf} \cdot \text{m}$ (214.0  $\pm 23.1 \text{ lbf} \cdot \text{ft}$ )
  - Normal clearance : 0.5 ~ 1.0 mm (0.02 ~ 0.04 in)
- If the bucket is not adjusted correctly, noise and vibration created during operation, and damaged O-ring, pin and bushing quickly.

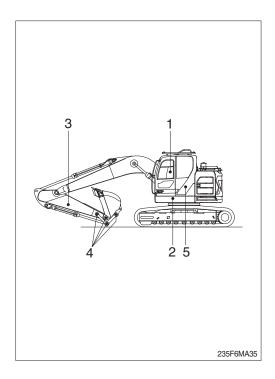

# 37) LUBRICATE PIN AND BUSHING

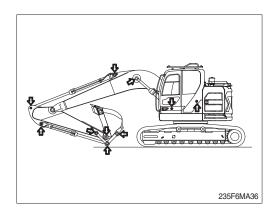

(1) Lubricate to each pin of working device Lubricate the grease to the grease nipple according to the lubricating interval.

No.	Description			
1	Lubrication manifold at boom			
2	Boom cylinder pin			
3	Lubricating manifold			
	Bucket cylinder pin (head, rod)	2		
	Bucket link (control rod)			
4	Arm and bucket connection pin			
	Arm and control rod connection pin			
	Arm and control link connection pin	1		
5	5 Boom rear bearing center			

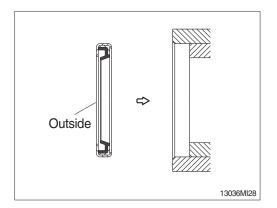

Shorten lubricating interval when working in the water or dusty place.

- (2) Dust seals are mounted on the rotating part of working device to extend the lubricating interval.
- Mount the lip to be faced outside when replace the dust seal.

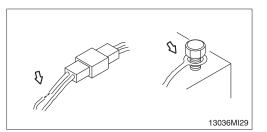

- If it is assembled in wrong direction, it will cause fast wear of pin and bushing, and create noise and vibration during operation.
- Assemble the seal same direction with picture and use with plastic hammer when replace.

# 7. ELECTRICAL SYSTEM

# 1) WIRING, GAUGES

Check regularly and repair loose or malfunctioning gauges when found.

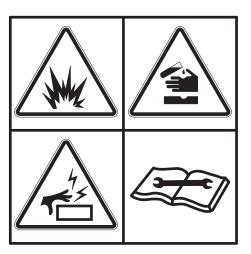

# 2) BATTERY

### (1) Clean

- ① Wash the terminal with hot water if it is contaminated, and apply grease to the terminals after washing.
- A Battery gas can explode. Keep sparks and flames away from batteries.
- Always wear protective glasses when working with batteries.
- ▲ Do not stain clothes or skin with electrolyte as it is acid.

Be careful not to get the electrolyte in eyes. Wash with clean water and go to the doctor if it enters the eyes.

36070FW05

# (2) Recycle

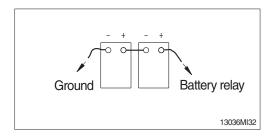

Never discard a battery.

Always return used batteries to one of the following locations.

- · A battery supplier
- · An authorized battery collection facility
- · Recycling facility

# (3) Method of removing the battery cable

Remove the cable from the ground connection first (  $\ominus$  terminal side) and reconnect it last when reassembling.

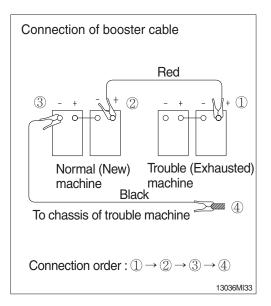

# 3) STARTING THE ENGINE WITH A BOOSTER CABLE

Keep following order when you are going to start engine using booster cable.

### (1) Connection of booster cable

#### \* Use the same capacity of battery for starting.

- Make sure that the starting switches of the normal machine and trouble machine are both at the OFF position.
- ② Connect the red terminal of booster cable to the battery (+) terminal between exhausted and new battery.
- ③ Connect the black terminal of the booster cable between new battery (-) terminal and chassis of trouble machine.
- Keep firmly all connection, the spark will be caused when connecting finally.

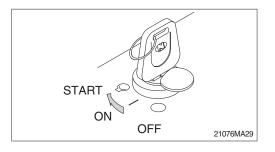

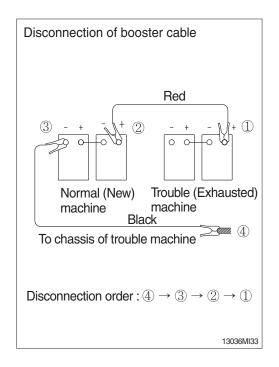

# (2) Starting the engine

- ① Starting the engine of the normal machine and keep it to run at high idle.
- ② Start engine of the trouble machine with starting switch.
- ③ If you can not start it by one time, restart the engine after 2 minutes.

# (3) Taking off the booster cable

- ① Take off the booster cable (black).
- ② Take off the booster cable (red) connected to the (+) terminal.
- ③ Run engine with high idle until charging the exhausted battery by alternator, fully.
- ▲ Explosive gas is generated while using the battery or charging it. Keep away flame and be careful not to cause the spark.
- \* Charge the battery in the well ventilated place.
- \* Place the machine on the earth or concrete. Avoid charging the machine on the steel plate.
- Do not connect (+) terminal and (-) terminal when connecting booster cable because it will be shorted.

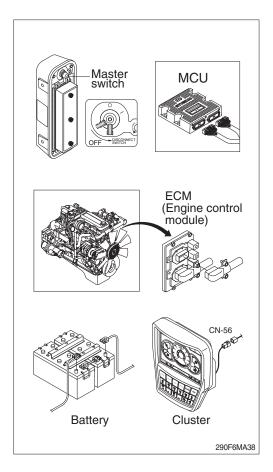

# (4) Welding repair

Before start to welding, follow the below procedure.

- ① Shut off the engine and remove the starting switch.
- ② Disconnect ground cable from battery by master switch.
- ③ Before carrying out any electric welding on the machine, the battery cables should be disconnected and the connectors pulled out of the electronic control units (MCU, ECM, cluster etc).
- ④ Connect the earth (ground) lead of the welding equipment as close to the welding point as possible.
- Do not weld or flame cut on pipes or tubes that contain flammable fluids. Clean them thoroughly with nonflammable solvent before welding or flame cutting on them.
- A Do not attempt to welding work before carry out the above.

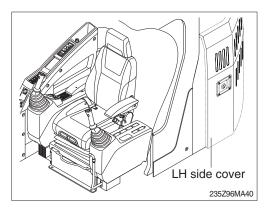

If not, it will caused serious damage at electric system.

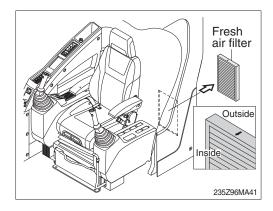

# 8. AIR CONDITIONER AND HEATER

# 1) CLEAN AND REPLACE OF FRESH AIR FILTER

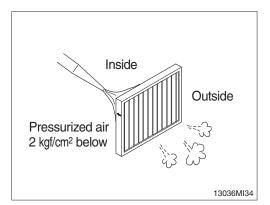

- \* Always stop the engine before servicing.
- (1) Open the LH side cover.

- (2) Remove the fresh air filter.
- \* When installing a filter, be careful not to change the filter direction.

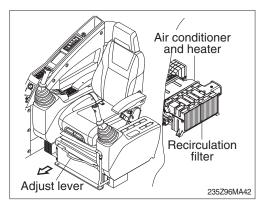

- (3) Clean the filter using a pressurized air (below 2 kgf/cm<sup>2</sup>, 28 psi).
- $\triangle$  When using pressurized air, be sure to wear safety glasses.
- (4) Inspect the filter after cleaning. If it is damaged or badly contaminated, use a new filter.

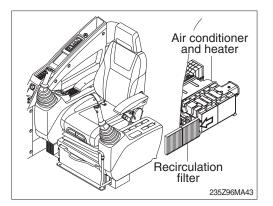

# 2) CLEAN AND REPLACE OF RECIRCULATION FILTER

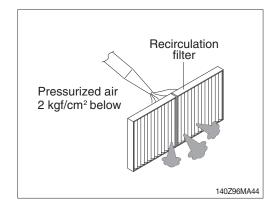

- $\ast\,$  Always stop the engine before servicing.
- (1) Move seat and console box to arrow direction using the adjust lever.

(2) Remove recirculation filter.

- (3) Clean the recirculation filter using a pressurized air (below 2 kgf/cm<sup>2</sup>, 28 psi) or washing with water.
- $\triangle$  When using pressurized air, be sure to wear safety glasses.
- \* Dry off after washing with water.
- (4) Inspect the filter after cleaning. If it is damaged or badly contaminated, use a new filter.

#### 3) PRECAUTIONS FOR USING AIR CONDITIONER

- (1) When using the air conditioner for a long time, open the window once every one hour.
- (2) Be careful not to overcool the cab.
- (3) The cab is properly cooled if the operator feels cool when entering there from outside (about 5°C lower than the outside temperature).
- (4) When cooling, change air occasionally.

#### 4) CHECK DURING SEASON

Ask the service center for replenishment of refrigerant or other maintenance service so that the cooling performance is not damaged.

#### 5) CHECK DURING OFF-SEASON

Operate the air conditioner 2 or 3 times a month (each for a few minutes) to avoid loss of oil film in the compressor.

# 6) REFRIGERANT

#### (1) Equipment contains fluorinated greenhouse gas.

Model	Туре	Quantity	GWP
HX235 LCR	HFC-134a	0.75 kg (1.65 lb)	1073 CO2 eq.

#### **% GWP**

Global warming potential (GWP) is a measure of how much heat a gas traps in the atmosphere relative to that of carbon dioxide (CO2). GWP is calculated in terms of the 100-year warming potential of 1 kg of a greenhouse gas relative to 1 kg of CO2.

#### (2) Environmental precautions

The air conditioning system of the machine is filled with HFC-134a refrigerant at the factory. HFC-134a refrigerant is a flourinated greenhouse gas and contributes to global warming. Do not release refrigerant into the environment.

#### (3) Safety precautions

Work on the air conditioning system must only be performed by a qualified service technician. Do not attempt to preform work on the air conditioning system.

Wear safety goggles, chemical resistant gloves and appropriate personal protective equipment to protect bare skin when there is a risk of contact with refrigerant.

#### (4) Action in case of exposure

① Eye contact / Limited skin contact

Rinse with warm water and apply a light bandage. Seek medical attention immediately.

(2) Extensive skin contact

Rinse with warm water and carefully heat the area with warm water or warm clothing. Seek medical attention immediately.

3 Inhalation

Leave the area and find fresh air. Seek medical attention immediately.
