## 3. DURING MAINTENANCE

Stop the engine immediately when the trouble of the machine is found.
Inspect immediately the cause of trouble such as vibration, overheating and trouble in the cluster then repair.

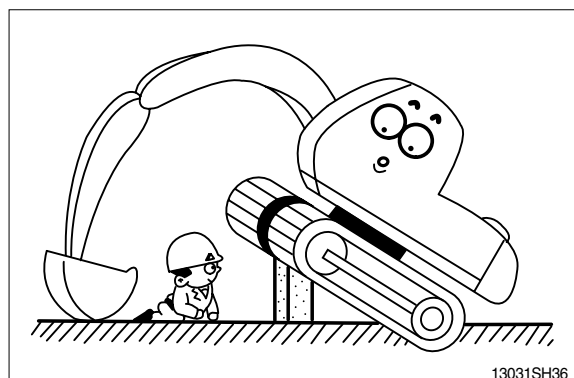

13031SH33

Park on a flat place and stop the engine for inspecting and repairing. Properly TAG machine is not operational. (Remove start key)
Extreme care shall be taken during maintenance work. Parts may require additional safe guard.

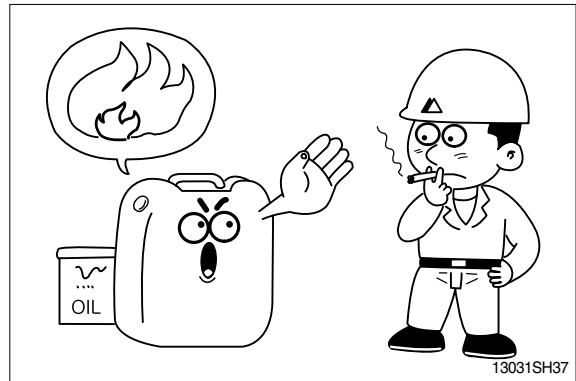

ON THE INSPECTION

13031SH34

Do not remove the radiator cap from hot engine.
Open the cap after the engine cools, below 50° C(112°F) to prevent personal injury from heated coolant spray or steam.

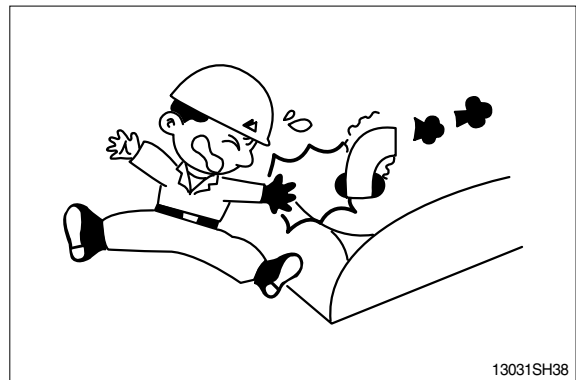

13031SH35

Do not work below the machine.
Be sure to work with proper safety supports.
Do not depend on the hydraulic cylinders to hold up the equipment and attachment.

13031SH36

There is the danger of fire in fuel and oil.
Store in cool dry area, away from any open
flames.

13031SH37

Do not touch exhaust pipe, or may cause severe
burn.

13031SH38

Do not open the engine hood and covers during
the engine is running.

13031SH39

Be careful of not hitting the edges when you
service engine.

13031SH40

Be careful that the front window may be promptly closed.

Be sure to support stay, when the side door needs to be opened.

Be careful that the open side door may closed by the external or national force like strong wind.

13031SH41

The antislip protection should be replaced if they have become worn or have been printed over.

13031SH42

Be careful of not touching slip, fall down etc., when you work at the upper frame to service engine and/or other component.

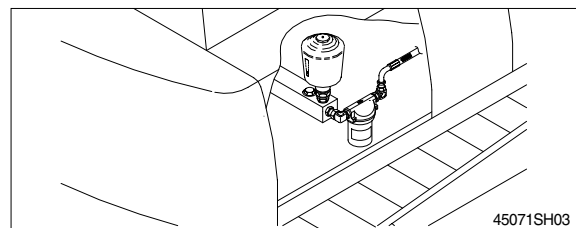

13031SH43

HIGH PRESSURE GAS

Contain high pressure gas.

To avoid explosion and personal injury, do not expose to fire, do not weld, do not drill.

Relieve pressure before discharging.

45071SH03

LIFT EYES CAN FAIL

Lift eyes or tank can fail when lifting tank containing fluids resulting in possible personal injury.

Drain tank of all fluids before lifting.
