

SECTION 7 MAINTENANCE STANDARD

Group 1	Operational Performance Test	7-1
Group 2	Major Components	7-21
Group 3	Track and Work Equipment	7-32

SECTION 7 MAINTENANCE STANDARD

GROUP 1 OPERATIONAL PERFORMANCE TEST

1. PURPOSE

Performance tests are used to check:

1) OPERATIONAL PERFORMANCE OF A NEW MACHINE

Whenever a new machine is delivered in parts and reassembled at a customer's site, it must be tested to confirm that the operational performance of the machine meets HD Hyundai Construction Equipment spec.

2) OPERATIONAL PERFORMANCE OF A WORKING MACHINE

With the passage of time, the machine's operational performance deteriorates, so that the machine needs to be serviced periodically to restore it to its original performance level.

Before servicing the machine, conduct performance tests to check the extent of deterioration, and to decide what kind of service needs to be done (by referring to the "Service Limits" in this manual).

3) OPERATIONAL PERFORMANCE OF A REPAIRED MACHINE

After the machine is repaired or serviced, it must be tested to confirm that its operational performance was restored by the repair and/or service work done.

145ZF7MS01

2. TERMINOLOGY

1) STANDARD

Specifications applied to the brand-new machine, components and parts.

145ZF7MS02

2) SERVICE LIMIT

The lowest acceptable performance level. When the performance level of the machine falls below this level, the machine must be removed from work and repaired. Necessary parts and components must be replaced.

145ZF7MS02A

3. OPERATION FOR PERFORMANCE TESTS

- 1) Observe the following rules in order to carry out performance tests accurately and safely.

(1) The machine

Repair any defects and damage found, such as oil or water leaks, loose bolts, cracks and so on, before starting to test.

(2) Test area

- ① Select a hard, flat surface.
- ② Secure enough space to allow the machine to run straight more than 20m, and to make a full swing with the front attachment extended.
- ③ If required, rope off the test area and provide signboards to keep unauthorized personnel away.

(3) Precautions

- ① Before starting to test, agree upon the signals to be employed for communication among coworkers. Once the test is started, be sure to communicate with each other using these signals, and to follow them without fail.
- ② Operate the machine carefully and always give first priority to safety.
- ③ While testing, always take care to avoid accidents due to landslides or contact with high voltage power lines. Always confirm that there is sufficient space for full swings.
- ④ Avoid polluting the machine and the ground with leaking oil. Use oil pans to catch escaping oil. Pay special attention to this when removing hydraulic pipings.

(4) Make precise measurements

- ① Accurately calibrate test instruments in advance to obtain correct data.
- ② Carry out tests under the exact test conditions prescribed for each test item.
- ③ Repeat the same test and confirm that the test data obtained can be procured repeatedly. Use mean values of measurements if necessary.

(290-7TIER) 7-3

2) ENGINE SPEED

(1) Measure the engine speed at each power mode

※ The engine speed at each power mode must meet standard RPM; if not, all other operational performance data will be unreliable. It is essential to perform this test first.

(2) Preparation

- ① Warm up the machine, until the engine coolant temperature reaches 50°C or more, and the hydraulic oil is 50±5°C.
- ② Set the accel dial at 10 (Max) position. Measure the engine RPM.

③ Measurement

(3) Start the engine. The engine will run at

- ① start idle speed. Measure engine speed with a engine rpm display. Measure and record the engine speed at
- ② each mode (P, S, E). Select the P-mode.
- ③ Lightly operate the bucket control lever a
- ④ few times, then return the control lever to neutral; The engine will automatically enter the auto-idle speed after 4 seconds. Measure and record the auto deceleration
- ⑤ speed.

(4) Evaluation

The measured speeds should meet the following specifications.

Unit : rpm

Model	Engine speed	Standard	Remarks
HX145CR HX145LCR	Start idle	1000±100	
	P mode	1850±50	
	S mode	1750±50	
	E mode	1650±50	
	Auto decel	1100±100	
	One touch decel	1000±100	

Condition : Set the accel dial at 10 (Max) position.

3) TRAVEL SPEED

- (1) Measure the time required for the excavator to travel a 20 m test track.

(2) Preparation

- ① Adjust the tension of both tracks to be equal.
- ② Prepare a flat and solid test track 20m in length, with extra length of 3 to 5 m on both ends for machine acceleration and deceleration.
- ③ Hold the bucket 0.3 to 0.5 m above the ground with the arm and bucket rolled in.
- ④ Keep the hydraulic oil temperature at $50 \pm 5^{\circ}\text{C}$.

145ZF7MS04

(3) Measurement

- ① Measure both the low and high speeds of the machine.
- ② Before starting either the low or high speed tests, adjust the travel mode switch to the speed to be tested, then select the following switch positions.
 - Power mode switch : P mode
- ③ Start traveling the machine in the acceleration zone with the travel levers at full stroke.
- ④ Measure the time required to travel 20 m.
- ⑤ After measuring the forward travel speed, turn the upperstructure 180° and measure the reverse travel speed.
- ⑥ Repeat steps ④ and ⑤ three times in each direction and calculate the average values.

145ZF7MS05A

(4) Evaluation

The average measured time should meet the following specifications.

Unit : Seconds / 20 m

Model	Travel speed	Standard	Maximum allowable	Remarks
HX145CR	1 Speed	22.5 ± 2.0	28.1	
HX145LCR	2 Speed	13.3 ± 1.0	16.6	

4) TRACK REVOLUTION SPEED

- (1) Measure the track revolution cycle time with the track raised off ground.

(2) Preparation

- ① Adjust the tension of both side tracks to be equal.
- ② On the track to be measured, mark one shoe with chalk.
- ③ Swing the upperstructure 90° and lower the bucket to raise the track off ground. Keep the boom-arm angle between 90 to 110° as shown. Place blocks under machine frame.
- ④ Keep the hydraulic oil temperature at $50 \pm 5^{\circ}\text{C}$.

145ZF7MS06

(3) Measurement

- ① Select the following switch positions.
 - Travel mode switch : 1 or 2 speed
 - Power mode switch : P mode
 - Auto idle switch : OFF
- ② Operate the travel control lever of the raised track in full forward and reverse.
- ③ Rotate 1 turn, then measure time taken for next 3 revolutions.
- ④ Raise the other side of machine and repeat the procedure.
- ⑤ Repeat steps ③ and ④ three times and calculate the average values.

(4) Evaluation

The revolution cycle time of each track should meet the following specifications.

Unit : Seconds / 3 revolutions

Model	Travel speed	Standard	Maximum allowable
HX145CR HX145LCR	1 Speed	26.1 ± 2.0	32.6
	2 Speed	15.2 ± 2.0	19

5) TRAVEL DEVIATION

- (1) Measure the deviation by the tracks from a 20m straight line.

(2) Preparation

- ① Adjust the tension of both tracks to be equal.
- ② Provide a flat, solid test yard 20 m in length, with extra length of 3 to 5 m on both ends for machine acceleration and deceleration.
- ③ Hold the bucket 0.3 to 0.5 m above the ground with the arm and bucket rolled in.
- ④ Keep the hydraulic oil temperature at $50 \pm 5^{\circ}\text{C}$.

145ZF7MS04

(3) Measurement

- ① Measure the amount of mistracking at high and low travel speeds.
- ② Before beginning each test, select the following switch positions.
 - Power mode switch : P mode
- ③ Start traveling the machine in the acceleration zone with the travel levers at full stroke.
- ④ Measure the distance between a straight 20 m line and the track made by the machine. (Dimension a)
- ⑤ After measuring the tracking in forward travel, turn the upperstructure 180° and measure that in reverse travel.
- ⑥ Repeat steps ④ and ⑤ three times and calculate the average values.

(210-7) 7-7(2)

(4) Evaluation

Mistrack should be within the following specifications.

Unit : mm / 20 m

Model	Standard	Maximum allowable	Remarks
HX145CR HX145LCR	200 below	240	

6) SWING SPEED

- (1) Measure the time required to swing three complete turns.

(2) Preparation

- ① Check the lubrication of the swing gear and swing bearing.
- ② Place the machine on flat, solid ground with ample space for swinging. Do not conduct this test on slopes.
- ③ With the arm rolled out and bucket rolled in, hold the bucket so that the height of the bucket pin is the same as the boom foot pin. The bucket must be empty.
- ④ Keep the hydraulic oil temperature at $50 \pm 5^{\circ}\text{C}$.

145ZF7MS07

(3) Measurement

- ① Select the following switch positions.
 - Power mode switch : P mode
- ② Operate swing control lever fully.
- ③ Swing 1 turn and measure time taken to swing next 3 revolutions.
- ④ Repeat steps ② and ③ three times and calculate the average values.

(4) Evaluation

The time required for 3 swings should meet the following specifications.

Unit : Seconds / 3 revolutions

Model	Power mode switch	Standard	Maximum allowable
HX145CR HX145LCR	P mode	16 ± 1.5	28

7) SWING FUNCTION DRIFT CHECK

- (1) Measure the swing drift on the bearing outer circumference when stopping after a 360° full speed swing.

(2) Preparation

- ① Check the lubrication of the swing gear and swing bearing.
- ② Place the machine on flat, solid ground with ample space for swinging. Do not conduct this test on slopes.
- ③ With the arm rolled out and bucket rolled in, hold the bucket so that the height of the bucket pin is the same as the boom foot pin. The bucket must be empty.
- ④ Make two chalk marks: one on the swing bearing and one directly below it on the track frame.
- ⑤ Swing the upperstructure 360°.
- ⑥ Keep the hydraulic oil temperature at $50 \pm 5^{\circ}\text{C}$.

145ZF7MS07

(3) Measurement

- ① Conduct this test in the M mode.
- ② Select the following switch positions.
 - Power mode switch : P mode
- ③ Operate the swing control lever fully and return it to the neutral position when the mark on the upperstructure aligns with that on track frame after swinging 360°.
- ④ Measure the distance between the two marks.
- ⑤ Align the marks again, swing 360°, then test the opposite direction.
- ⑥ Repeat steps ④ and ⑤ three times each and calculate the average values.

145ZF7MS08

(4) Evaluation

The measured drift angle should be within the following specifications.

Unit : Degree

Model	Power mode switch	Standard	Maximum allowable	Remarks
HX145CR HX145LCR	P mode	90 below	157.5	

8) SWING BEARING PLAY

- (1) Measure the swing bearing play using a dial gauge to check the wear of bearing races and balls.

(2) Preparation

- ① Check swing bearing mounting cap screws for loosening.
- ② Check the lubrication of the swing bearing. Confirm that bearing rotation is smooth and without noise.
- ③ Install a dial gauge on the track frame as shown, using a magnetic base.
- ④ Position the upperstructure so that the boom aligns with the tracks facing towards the front idlers.
- ⑤ Position the dial gauge so that its needle point comes into contact with the bottom face of the bearing outer race.
- ⑥ Bucket should be empty.

(210-7) 7-10(1)

(3) Measurement

- ① With the arm rolled out and bucket rolled in, hold the bottom face of the bucket to the same height of the boom foot pin. Record the dial gauge reading (h1).
- ② Lower the bucket to the ground and use it to raise the front idler 50cm. Record the dial gauge reading (h2).
- ③ Calculate bearing play (H) from this data (h1 and h2) as follows.

$$H = h2 - h1$$

Measurement : (h1)

Measurement : (h2)

145ZF7MS09

(4) Evaluation

The measured drift should be within the following specifications.

Unit : mm

Model	Standard	Maximum allowable	Remarks
HX145CR HX145LCR	0.5 ~ 1.5	3.0	

9) HYDRAULIC CYLINDER CYCLE TIME

- (1) Measure the cycle time of the boom, standard arm, and standard bucket cylinders.

(2) Preparation

- ① To measure the cycle time of the boom cylinders:
With the arm rolled out and the empty bucket rolled out, lower the bucket to the ground, as shown.
- ② To measure the cycle time of the arm cylinder:
With the empty bucket rolled in, position the arm so that it is vertical to the ground. Lower the boom until the bucket is 0.5 m above the ground.
- ③ To measure the cycle time of the bucket cylinder:
The empty bucket should be positioned at midstroke between roll-in and roll-out, so that the sideplate edges are vertical to the ground.
- ④ Keep the hydraulic oil temperature at $50 \pm 5^\circ\text{C}$.

(3) Measurement

- ① Select the following switch positions.
 - Power mode switch : P mode
- ② To measure cylinder cycle times.
 - Boom cylinders.
Measure the time it takes to raise the boom, and the time it takes to lower the boom. To do so, position the boom at one stroke end then move the control lever to the other stroke end as quickly as possible.
 - Arm cylinder.
Measure the time it takes to roll in the arm, and the time it takes to roll out the arm. To do so, position the bucket at one stroke end, then move the control lever to the other stroke end as quickly as possible.

Boom cylinder

Arm cylinder

Bucket cylinder

145ZF7MS10

- Bucket cylinders

Measure the time it takes to roll in the bucket, and the time it takes to roll out the bucket. To do so, position the bucket at one stroke end, then move the control lever to the other stroke end as quickly as possible.

- Repeat each measurement 3 times and calculate the average values.

(4) Evaluation

The average measured time should meet the following specifications.

Unit : Seconds

Model	Function		Standard	Maximum allowable	Remarks
HX145CR HX145LCR	Boom raise		4 ± 0.4	5.2	
	Boom lower		3.3 ± 0.4	4.3	
	Arm in	Regen ON	2.8 ± 0.4	3.6	
		Regen OFF	3.2 ± 0.4	4.2	
	Arm out		2.8 ± 0.3	3.6	
	Bucket in		3.5 ± 0.4	4.6	
	Bucket out		2.2 ± 0.3	2.9	

10) DIG FUNCTION DRIFT CHECK

- (1) Measure dig function drift, which can be caused by oil leakage in the control valve and boom, standard arm, and standard bucket cylinders, with the loaded bucket.
When testing the dig function drift just after cylinder replacement, slowly operate each cylinder to its stroke end to purge air.

(2) Preparation

- ① Load bucket fully. Instead of loading the bucket, weight(W) of the following specification can be used.
 $W = M^3 \times 1.5$
 Where :
 M^3 = Bucket heaped capacity (m³)
 1.5 = Soil specific gravity
- ② Position the arm cylinder with the rod 20 to 30 mm extended from the fully retracted position.
- ③ Position the bucket cylinder with the rod 20 to 30 mm retracted from the fully extended position.
- ④ With the arm rolled out and bucket rolled in, hold the bucket so that the height of the bucket pin is the same as the boom foot pin.
- ⑤ Keep the hydraulic oil temperature at $50 \pm 5^\circ\text{C}$.

145ZF7MS11

(3) Measurement

- ① Stop the engine.
- ② Five minutes after the engine has been stopped, measure the changes in the positions of the boom, arm and bucket cylinders.
- ③ Repeat step ② three times and calculate the average values.

- (4) The measured drift should be within the following specifications.

Unit : mm / 5min

Model	Drift to be measured	Standard	Maximum allowable	Remarks
HX145CR HX145LCR	Boom cylinder	10 below	20	
	Arm cylinder	10 below	20	
	Bucket cylinder	40 below	50	

11) CONTROL LEVER OPERATING FORCE

- (1) Use a spring scale to measure the maximum resistance of each control lever at the middle of the grip.

(2) Preparation

- ① Keep the hydraulic oil temperature at $50 \pm 5^{\circ}\text{C}$.

(3) Measurement

- ① Start the engine.
- ② Select the following switch positions.
- Power mode switch : P mode
- ③ Operate each boom, arm, bucket and swing lever at full stroke and measure the maximum operating force for each.
- ④ Lower the bucket to the ground to raise one track off the ground. Operate the travel lever at full stroke and measure the maximum operating force required. When finished, lower the track and then jack-up the other track.
- ⑤ Repeat steps ③ and ④ three times and calculate the average values.

(4) Evaluation

The measured operating force should be within the following specifications.

Unit : kgf

Model	Kind of lever	Standard	Maximum allowable	Remarks
HX145CR HX145LCR	Boom lever	1.3 or below	1.7	
	Arm lever	1.3 or below	1.7	
	Bucket lever	1.3 or below	1.7	
	Swing lever	1.3 or below	1.7	
	Travel lever	2.1 or below	3.15	

12) CONTROL LEVER STROKE

(1) Measure each lever stroke at the lever top using a ruler.

※ When the lever has play, take a half of this value and add it to the measured stroke.

(2) Preparation

Keep the hydraulic oil temperature at $50 \pm 5^{\circ}\text{C}$.

(3) Measurement

- ① Stop the engine.
- ② Measure each lever stroke at the lever top from neutral to the stroke end using a ruler.
- ③ Repeat step ② three times and calculate the average values.

(4) Evaluation

The measured drift should be within the following specifications.

Unit : mm

Model	Kind of lever	Standard	Maximum allowable	Remarks
HX145CR HX145LCR	Boom lever	90 ± 10	115	
	Arm lever	90 ± 10	115	
	Bucket lever	90 ± 10	115	
	Swing lever	90 ± 10	115	
	Travel lever	142 ± 10	178	

13) PILOT PRIMARY PRESSURE

(1) Preparation

- ① Keep the hydraulic oil temperature at $50 \pm 5^{\circ}\text{C}$.

(2) Measurement

- ① Select the following switch positions.
 - Power mode switch : P mode
 - Auto decel switch : OFF
- ② Measure the primary pilot pressure by the monitoring menu of the cluster.

(3) Evaluation

145ZF7MS12

The average measured pressure should meet the following specifications:

Unit : kgf / cm^2

Model	Engine speed	Standard	Allowable limits	Remarks
HX145CR HX145LCR	P mode	40^{+2}_0	-	

14) FOR TRAVEL SPEED SELECTING PRESSURE:

(1) Preparation

- ① Stop the engine.
- ② Loosen the cap and relieve the pressure in the tank by pushing the top of the air breather.
- ③ To measure the speed selecting pressure: Install a connector and pressure gauge assembly to turning joint P port as shown.
- ④ Start the engine and check for on leakage from the adapter.
- ⑤ Keep the hydraulic oil temperature at $50 \pm 5^{\circ}\text{C}$.

21077MS13

(2) Measurement

- ① Select the following switch positions.
Travel mode switch : 1 speed
 2 speed
• Mode selector : P mode
- ② Measure the travel speed selecting pressure in the Hi or Lo mode.
- ③ Repeat step ② three times and calculate the average values.

(3) Evaluation

The average measured pressure should be within the following specifications.

Unit : kgf / cm²

Model	Travel speed mode	Standard	Maximum allowable	Remarks
HX145CR HX145LCR	1 Speed	0	-	
	2 Speed	40±5	-	

15) SWING PARKING BRAKE RELEASING PILOT PRESSURE

(1) Preparation

- ① Stop the engine.
- ② Loosen the cap and relieve the pressure in the tank by pushing the top of the air breather.
- ③ The pressure release L wrench to bleed air.
- ④ Install a connector and pressure gauge assembly to swing motor SH port, as shown.
- ⑤ Start the engine and check for oil leakage from the adapter.
- ⑥ Keep the hydraulic oil temperature at $50 \pm 5^{\circ}\text{C}$.

145ZF7MS14

(2) Measurement

- ① Select the following switch positions.
 - Power mode switch : P mode
- ② Operate the swing function or arm roll in function and measure the swing brake control pressure with the brake disengaged. Release the control lever to return to neutral and measure the control pressure when the brake is applied. Repeat step ② three times and calculate
- ③ the average values.

Evaluation

(3)

The average measured pressure should be within the following specifications.

Unit : kgf / cm^2

Model	Description	Standard	Allowable limits	Remarks
HX145CR	Brake disengaged	40	Over 9	
HX145LCR	Brake applied	0	-	

16) MAIN PUMP DELIVERY PRESSURE

(1) Preparation

- ① Keep the hydraulic oil temperature at $50 \pm 5^{\circ}\text{C}$.

(2) Measurement

- ① Select the following switch positions.
 - Power mode switch : P mode
- ② Measure the main pump delivery pressure in the P mode (high idle).

(3) Evaluation

The average measured pressure should meet the following specifications.

145ZF7MS15

Unit : kgf / cm^2

Model	Engine speed	Standard	Allowable limits	Remarks
HX145CR HX145LCR	High idle	40^{+2}_0	-	

17) SYSTEM PRESSURE REGULATOR RELIEF SETTING

(1) Preparation

- ① Keep the hydraulic oil temperature at $50 \pm 5^{\circ}\text{C}$.

(2) Measurement

- ① Select the following switch positions.
 - Power mode switch : P mode
- ② Slowly operate each control lever of boom, arm and bucket functions at full stroke over relief and measure the pressure.
- ③ In the swing function, place bucket against an immovable object and measure the relief pressure.
- ④ In the travel function, lock undercarriage with an immovable object and measure the relief pressure.

145ZF7MS15

(3) Evaluation

The average measured pressure should be within the following specifications.

Unit : kgf / cm^2

Model	Function to be tested	Standard	Port relief setting at 20 lpm
HX145CR HX145LCR	Boom, Arm, Bucket	$350 (380) \pm 10$	400 ± 10
	Travel	350 ± 10	-
	Swing	285 ± 10	-

() : Power boost

GROUP 2 MAJOR COMPONENT

1. MAIN PUMP

140Z97MP01

Part name & inspection item		Standard dimension	Recommended replacement value	Counter measures
Clearance between piston (1) & cylinder bore (2) (D-d)		0.032	0.056	Replace piston or cylinder.
Play between piston (1) & shoe caulking section (3) (δ)		0-0.1	0.3	Replace assembly of piston & shoe.
Thickness of shoe (t)		3.9	3.7	
Free height of cylinder spring (4) (L)		41.1	40.3	Replace cylinder spring.
Combined height of set plate (5) (H) & spherical bushing (6) (h) (H-h)		17.0	15.8	Replace set plate or spherical bushing.
Surface roughness for valve plate (Sliding face) (7,8), swash plate (shoe plate area) (9), & cylinder (2) (Sliding face)	Surface roughness necessary to be corrected	3z		Lapping
	Standard surface roughness (Corrected value)	0.4z or lower		

2. MAIN CONTROL VALVE

Part name	Inspection item	Criteria & measure
Casing	<ul style="list-style-type: none"> Existence of scratch, rusting or corrosion. 	<ul style="list-style-type: none"> In case of damage in following section, replace part. <ul style="list-style-type: none"> Sliding sections of casing fore and spool, especially land sections applied with holded pressure. Seal pocket section where spool is inserted. Seal section of port where O-ring contacts. Seal section of each relief valve for main, travel, and port. Other damages that may damage normal functions.
Spool	<ul style="list-style-type: none"> Existence of scratch, gnawing, rusting or corrosion. O-ring seal sections at both ends. Insert spool in casing hole, rotate and reciprocate it. 	<ul style="list-style-type: none"> Replacement when its outside sliding section has scratch (especially on seals-contacting section). Replacement when its sliding section has scratch. Correction or replacement when O-ring is damaged or when spool does not move smoothly.
Poppet	<ul style="list-style-type: none"> Damage of poppet or spring Insert poppet into casing and function it. 	<ul style="list-style-type: none"> Correction or replacement when sealing is incomplete. Normal when it can function lightly without being caught.
Around spring	<ul style="list-style-type: none"> Rusting, corrosion, deformation or breaking of spring, spring seat, plug or cover. 	<ul style="list-style-type: none"> Replacement for significant damage.
Around seal for spool	<ul style="list-style-type: none"> External oil leakage. Rusting, corrosion or deformation of seal plate. 	<ul style="list-style-type: none"> Correction or replacement. Correction or replacement.
Main relief valve, port relief valve & negative control relief valve	<ul style="list-style-type: none"> External rusting or damage. Contacting face of valve seat. Contacting face of poppet. Abnormal spring. O-rings, back up rings and seals. 	<ul style="list-style-type: none"> Replacement. Replacement when damaged. Replacement when damaged. Replacement. 100% replacement in general.

3. SWING DEVICE

1) WEARING PARTS

Inspection item	Standard dimension	Recommended replacement value	Counter measures
Clearance between piston and cylinder block bore	0.041	0.060	Replace piston or cylinder block
Thickness of valve plate	6	5.88	Replace
Play between piston and shoe caulking section (δ)	0.025	0.1	Replace assembly of piston and shoe
Thickness of shoe (t)	6.6	6.5	Replace assembly of piston and shoe
Combined height of retainer plate and spherical bushing (H-h)	17.6	17.3	Replace set of retainer plate and sperical bushing
Thickness of friction plate	2.94	2.7	Replace
<div style="display: flex; justify-content: space-around; align-items: center;">   </div> <div style="display: flex; justify-content: space-between; margin-top: 10px;"> 140W77MS12 2609A7MS01 </div>			

2) SLIDING PARTS

Part name	Standard roughness	Allowable roughness	Remark
Shoe	Rmax=1S (Ra=0.2a) (LAPPING)	4S (Ra=0.1a)	
Shoe plate	Rmax=0.4S (Ra=0.1a) (LAPPING)	3S (Ra=0.8a)	
Cylinder	Rmax=0.4S (Ra=0.1a) (LAPPING)	3S (Ra=0.8a)	
Valve plate	Rmax=0.4S (Ra=0.1a) (LAPPING)	2S (Ra=0.5a)	

4. TRAVEL MOTOR

1) TYPE 1

Problem		Cause	Remedy
Does not start	Pressure is not developed	<ul style="list-style-type: none"> · Pump failure · Control valve malfunction 	<ul style="list-style-type: none"> · Check if action other than traveling is available. If faulty, repair. · Check if spool moves correctly. Repair if necessary.
	Pressure is developed	<ul style="list-style-type: none"> · Brake valve failure -Sleeve stick -Check valve stick · Motor failure -Valve seat seizure · Gear broken and fragment locked · Overloaded 	<ul style="list-style-type: none"> · Replace brake valve · Replace -Check hydraulic oil for contamination · Replace reduction gear · Reduce load
Oil leakage	Leakage from engaging surfaces	<ul style="list-style-type: none"> · Scratch on engaging surfaces · Loosening by poor bolt tightening 	<ul style="list-style-type: none"> · Correct surfaces by oilstone or sandpaper or replace · Check after retightening
	Leakage from casing	<ul style="list-style-type: none"> · Plug loosened · Crack formed by stone 	<ul style="list-style-type: none"> · Retighten · Replace reduction gear

Meanders	Meanders at low pressure	<ul style="list-style-type: none"> · Delivery rate is different between right and left · Motor drain rate is different between right and left 	<ul style="list-style-type: none"> · Repair pump · Replace motor
	Meanders at high pressure	<ul style="list-style-type: none"> · Delivery rate is different between right and left · Motor drain rate is different between right and left 	<ul style="list-style-type: none"> · Repair regulator or pump · Replace motor
	Meanders at high pressure	<ul style="list-style-type: none"> · Relief pressure dropped at right and left brake valve · Main relief pressure dropped at right or left of control valve 	<ul style="list-style-type: none"> · Replace brake valve · Replace main relief valve
Pump delivery is poor		<ul style="list-style-type: none"> · Regulator operation poor · External leakage of pump is excessive 	<ul style="list-style-type: none"> · Repair regulator · Repair pump
External leakage of motor is excessive		-	<ul style="list-style-type: none"> · Replace motor

2) TYPE 2

(1) Troubleshooting

① The motor does not rotate

Problem	Cause	Remedy
The pressure of a motor does not increase	· The oil is bypassed at relief valve	- Fix or exchange relief valve
	· Malfunction of relief valve - Stick of plunger - Malfunction of plunger seat part - Cut of Spring	- Modify of stick part - Disassembly, clean - Exchange a parts - Exchange the relief valve
	· The cracks happens at the inner path of valve casing	- Exchange the check valve
	· Abrasion and abnormality on the adhered surface of check	- Fix or exchange the abnormal parts
Although the pressure increases, a hydraulic motor does not rotate	· Unmeasured external resistance	- Exchange friction plate and separated Plate
	· Stick of counter balance spool	- Check of counter balance spool
	· Do not become break off	- Check and exchange the orifice (4) - Check of brake piston ring
	· Stick of brake piston	- Disassembly and check
	· Stick of friction plate	- Fix or exchange the abnormal parts
	· Damage of traveling reduction gear	- Exchange the traveling reduction gear

② Rotate very slow

Problem	Cause	Remedy
Lack of the number of rotation	· Shortage of supplied oil	- Check the oil circuit up to a motor
	· Oil Temperature is too higher	- Make the temperature down of the oil
	· Abnormal oil leakage	- Fix or exchange the abnormal parts
	· Two speed is late - Stick of swash piston	- Fix or exchange the abnormal parts

③ To control or adjust a brake is hard

Problem	Cause	Remedy
Brake torque is low	· Abrasion of friction and separated plate	- Fix or exchange the abnormal parts
	· Damage of brake spring	
	· Damage of brake piston	

④ Shortage of rotating force at the standard value

Problem	Cause	Remedy
Brake is released, but the turning force is low	· Excavator main relief valve is not set correctly	- Resetting the main relief valve
	· Pressure down of motor relief valve	- Resetting the relief valve pressure - Exchange the relief valve
	· Malfunction of check valve	- Exchange the check valve
	· Scratch of valve plate	- Fix or exchange the abnormal parts

⑤ Many slip

Problem	Cause	Remedy
Brake is released, but the turning force is week	· Malfunction of relief valve	- Fix or exchange the abnormal parts
	· Check valve error	
	· Stick of counter balance spool	
	· Valve plate scratch / copper peeling phenomena	

⑥ It is not two speed changeover

Problem	Cause	Remedy
It is not variable speed (low/high 2- stage speed) changeover	· Pilot Line error	- Fix or exchange the abnormal parts
	· Two speed changeover spool stick	
	· Swash piston stick	

⑦ Oil leakage

Problem	Cause	Remedy
Leakage at oil seal	· Drain pressure is high	- Remove the abnormal substances after exchanging the damaged part
	· Seal error	- Check a drain line of an equip
Leakage on a assembled surface	· Damage of a O-ring	- Exchange O-ring
	· Bolt or plug is released	- Tighten the parts with fixed torque

(2) Wearing parts

Part name & inspection item	Standard dimension	Recommended value for replacement	Remedy
Piston and cylinder block bore tolerance (space = $D - d$)	0.05 mm	0.065 mm	D : Cylinder block bore dia d : Piston out dia
Piston and shoe tolerance (space = k)	0	0.3 mm	After pulling the piston and the shoe, measures the distance
Thickness of shoe (t)	5.5 mm	5.2 mm	-
Thickness of shoe plate (h)	3.3 mm	3.0 mm	-
Thickness of set plate (t1)	6 mm	5.8 mm	If the plate thickness is below 5.8 mm, change the set plate and ball guide at the same time
Set plate and the ball guide height of the assembly (height of the assembly $H - h$)	13.5 mm	13.3 mm	If assembly height is below 13.3 mm, change the set plate and ball guide at the same time
 <p>3809A7TM041</p>	 <p>Shoe Ball guide Set plate</p> <p>3809A7TM04</p>		

5. RCV LEVER

Maintenance check item	Criteria	Remark
Leakage	The valve is to be replaced when the leakage becomes more than 1000 cc/m at neutral handle position, or more than 2000 cc/m during operation.	Conditions : Primary pressure : 40 kgf/cm ² Oil viscosity : 23 cSt
Spool	This is to be replaced when the sliding surface has worn more than 10 μ m, compared with the non-sliding surface.	The leakage at the left condition is estimated to be nearly equal to the above leakage.
Push rod	 <p>This is to be replaced when the top end has worn more than 1 mm.</p>	
Play at operating section	The pin, shaft, and joint of the operating section are to be replaced when their plays become more than 2 mm due to wears or so on.	When a play is due to looseness of a tightened section, adjust it.
Operation stability	When abnormal noises, hunting, primary pressure drop, etc. are generated during operation, and these cannot be remedied, referring to section 6 troubleshooting, replace the related parts.	

Notes 1. It is desirable to replace seal materials, such as O-rings, every disassembling. However, they may be reused, after being confirmed to be free of damage.

6. RCV PEDAL

Maintenance check item	Criteria	Remark
Leakage	The valve is to be replaced when the leakage effect to the system. For example, the primary pressure drop.	Conditions : Primary pressure : 40 kgf/cm ² Oil viscosity : 23 cSt
Spool	This is to be replaced when the sliding surface has worn more than 10 μ m, compared with the non-sliding surface.	The leakage at the left condition is estimated to be nearly equal to the above leakage.
Push rod	 <p>This is to be replaced when the top end has worn more than 1 mm.</p>	
Play at operating section	The pin, shaft, and joint of the operating section are to be replaced when their plays become more than 2 mm due to wears or so on.	When a play is due to looseness of a tightened section, adjust it.
Operation stability	When abnormal noises, hunting, primary pressure drop, etc. are generated during operation, and these cannot be remedied, referring to section 6. Troubleshooting, replace the related parts.	

Notes 1. It is desirable to replace seal materials, such as O-rings, every disassembling. However, they may be reused, after being confirmed to be free of damage.

7. TURNING JOINT

Part name		Maintenance standards	Remedy
Body, Stem	Sliding surface with sealing sections.	Plating worn or peeled due to seizure or contamination.	Replace
	Sliding surface between body and stem other than sealing section.	• Worn abnormality or damaged more than 0.1 mm (0.0039 in) in depth due to seizure contamination.	Replace
		• Damaged more than 0.1 mm (0.0039 in) in depth.	Smooth with oilstone.
	Sliding surface with thrust plate.	• Worn more than 0.5 mm (0.02 in) or abnormality.	Replace
		• Worn less than 0.5 mm (0.02 in).	Smooth
Cover	Sliding surface with thrust plate.	• Damage due to seizure or contamination remediable within wear limit (0.5 mm) (0.02 in).	Smooth
		• Worn more than 0.5 mm (0.02 in) or abnormality.	Replace
		• Worn less than 0.5 mm (0.02 in).	Smooth
Seal set	-	• Extruded excessively from seal groove square ring. 	Replace
	-	• Slipper ring 1.5 mm (0.059 in) narrower than seal groove, or narrower than back ring. 	Replace
	-	• Worn more than 0.5 mm (0.02 in) ~ 1.5 mm (MAX.) (0.059 in) 	Replace

8. CYLINDER

Part name	Inspecting section	Inspection item	Remedy
Piston rod	• Neck of rod pin	• Presence of crack	• Replace
	• Weld on rod hub	• Presence of crack	• Replace
	• Stepped part to which piston is attached.	• Presence of crack	• Replace
	• Threads	• Presence of crack	• Recondition or replace
	• Plated surface	• Plating is not worn off to base metal. • Rust is not present on plating. • Scratches are not present.	• Replace or replate • Replace or replate • Recondition, replate or replace
	• Rod	• Wear of O.D.	• Recondition, replate or replace
	• Bushing at mounting part	• Wear of I.D.	• Replace
Cylinder tube	• Weld on bottom	• Presence of crack	• Replace
	• Weld on head	• Presence of crack	• Replace
	• Weld on hub	• Presence of crack	• Replace
	• Tube interior	• Presence of faults	• Replace if oil leak is seen
	• Bushing at mounting part	• Wear on inner surface	• Replace
Gland	• Bushing	• Flaw on inner surface	• Replace if flaw is deeper than coating

GROUP 3 TRACK AND WORK EQUIPMENT

1. TRACK

1) TRACK ROLLER

21037MS01

Unit : mm

No.	Check item	Criteria				Remedy	
1	Outside diameter of flange	Standard size		Repair limit		Rebuild or replace	
		ø 190		-			
2	Outside diameter of tread	ø 150		ø 138			
3	Width of tread	36.5		42.5			
4	Width of flange	26.5		-			
5	Clearance between shaft and bushing	Standard size	tolerance		Standard clearance	Clearance limit	Replace bushing
			Shaft	Hole			
		ø 65	-0.25 -0.35	+0.12 +0.075	0.325 to 0.47	2.0	
6	Side clearance of roller (both side)	Standard clearance		Clearance limit		Replace	
		0.1 to 1.3		2.0			

2) CARRIER ROLLER

21037MS02

Unit : mm

No.	Check item	Criteria				Remedy
1	Outside diameter of flange	Standard size		Repair limit		Rebuild or replace
		ø 175		-		
2	Outside diameter of tread	ø 151		ø 141		
3	Width of tread	37.25		42.25		
4	Width of flange	18.25		-		
5	Clearance between shaft and bushing	Standard size & Tolerance		Standard clearance	Clearance limit	Replace bushing
		Shaft	Hole			
		ø 41.27 ⁰ _{+0.05}	ø 41.5 ^{+0.2} _{-0.1}	0.13 to 0.48	1.2	

3) IDLER

21037MS03

Unit : mm

No.	Check item	Criteria				Remedy
1	Outside diameter of flange	Standard size		Repair limit		Rebuild or replace
		ø 552		-		
2	Outside diameter of tread	ø 507		ø 497		
3	Width of protrusion	67		-		
4	Total width	135		-		
5	Width of tread	34		39		
6	Clearance between shaft and bushing	Standard size & Tolerance		Standard clearance	Clearance limit	Replace bushing
		Shaft	Hole			
		ø 70 ⁰ _{-0.03}	ø 70.3 ^{+0.05} ₀	0.3 to 0.38	2.0	
7	Clearance between shaft and support	ø 70 ⁰ _{-0.03}	ø 70 ^{+0.07} _{+0.03}	0.03 to 0.1	1.2	Replace
8	Side clearance of idler (both side)	Standard clearance		Clearance limit		Replace bushing
		0.25 to 1.15		2.0		

4) TRACK

21037MS04

Unit : mm

No.	Check item	Criteria		Remedy
		Standard size	Repair limit	
1	Link pitch	171.45	175.65	Turn or replace
2	Outside diameter of bushing	ø 53.75	ø 43.95	Rebuild or replace
3	Height of grouser	25	16	
4	Height of link	94.5	86.5	
5	Tightening torque (Tightening angle method)	Initial tightening torque : $42 \pm 4 \text{ kgf} \cdot \text{m}$ Additional tightening angle : 32°		Retighten

5) TRACK FRAME AND RECOIL SPRING

21037MS05

Unit : mm

No.	Check item	Criteria				Remedy
			Standard size	Tolerance	Repair limit	
1	Vertical width of idler guide	Track frame	103	+2 0	107	Rebuild or replace
		Idler support	100	0 -0.5	98	
2	Horizontal width of idler guide	Track frame	192	+2 0	196	
		Idler support	190	-	188	
3	Recoil spring	Standard size			Repair limit	Replace
		Free length	Installation length	Installation load	Free length	Installation load
		ø 192 × 470	405	8,497kg	-	6,978kg

2. WORK EQUIPMENT
